Here's where knotty boards can make themselves useful. A box with short, thick sides is more resistant to rough handling if it is made of knotty lumber than if it is made of clear lumber, says the Forest Service of the U. S. department of agriculture. Boxes with short, thick sides may come apart as a result of the direct pull exerted by the absorbed by springing of the boards. Knotty boards absorb such shocks better than clear boards because they are more flexible.

It is profitable to raise colts from mares that earn their feed by furnishing farm horsepower, and under good management enough colts can be raised annually to replace aging work stock. The young stock can be worked from 4 to 7 years of age and then sold. The outstanding requirement of profitable broodmares is that they be both breeders and workers. Ordinarily sound, young mares of the heavy draft type are the best to use. The cost of raising horses is less if good use is made of coarse roughage in winter and cheap pastures in summer.
