Car and Tots Roll Over Bank

BRAKES RELEASED WHILE PLAYING IN CAR

Fall 40 Feet; Escape Any Serious Injuries

Two excited to remember, little Billie Condit and Fay Hall, both three-year-olds, were the cause of a Chevrolet touring car to roll 40 feet over the embankment alongside of the railroad tracks, Sunday noon when the car parked alongside the Cleveland apartments started down grade towards the tracks.

Bill, son of Mr. and Mrs. Ray Condit, and Fay, daughter of Mr. and Mrs. J. H. Hall, were playing in the car and it is surmised that the children may have released the emergency brake.

Both children were severely shaken up and bruised, especially Fay, who was unable to climb out of the rolling car in time, and was picked up unconscious alongside of the wrecked car, which belonged to J. A. Hall.

Bill Condit was either thrown clear of the car while in motion or jumped, for he climbed back over the embankment immediately following the accident.

Considering the steep bank and condition of the wrecked car it is considered a miracle that the children escaped serious injuries or death.

9 Head Dairy Stock Coming

THREE BULLS, THREE COWS AND THEIR DAUGHTERS

N. C. Jamison to Be Honored In Dairy Exhibit

Oregon State College, Corvallis, June 2.—Demonstrating as well as illustrating the profit in dairy herd improvement, the special dairy train to visit Vernonia tomorrow is bringing nine head of dairy stock—three bulls, three cows and their daughters, which are living examples of the value of good breeding.

The three cows and their daughters are from the college Ayshire herd on which exact records have been kept. In each instance the daughter, sired by a bull of high producing strain, has greatly exceeded the record of her mother.

In emphasizing this phase of dairy development, the train will be carrying out one of the chief features fostered and encouraged by the late N. C. Jamison. Cow testing associations received their greatest impetus while he was dairy extension specialist and are now an important part of the state dairy program.

Recognition of the work done by Jamison is being given on this demonstration train in a specific way as well. His enlarged picture is being hung in one of the coaches and a statement is being given giving him credit for many of the plans of the train now being carried out. Most of the posters setting forth condensed information were designed by Jamison prior to his fatal illness.

At each stop a platform demonstration will be given by P. M. Brandt, head of the college dairy department, who will translate the milk records of the dairy animals into comparative cash returns. The combined production of the mothers for a year was 24,260 pounds of milk, while that of the three daughters was 37,167, an increase of more than 56 per cent. The difference in cash returns above feed cost between the three mothers and three daughters amounted to \$233.14.

Their Mistake

It has been brought to the attention of the committee in charge of the Dairy Train demonstration, here tomorrow, that several merchants were disappointed because they were not solicited for funds to cover expenses of the train.

The committee regrets it did not have enough time to personally solicit every merchant, and for that reason stopped their activities when sufficient funds had been raised.
