Glanders, transport planes, invasion barges, carried the Sicilian Invasion!

"FLYING LOGS"

LAND TROOPS IN EUROPE!

5000 MORE LOGGERS NEEDED!

The War Manpower Commission is calling loggers out of the shipyards, airplane factories, and other war industries—for no work is more important than log production right now!

FANTASTIC? Not at all! America is building the greatest fleets of troop-carrying transports and gliders the world has ever known. And they are made of WOOD! England is mass-producing Mosquito Bombers that out-speed the Nazi's fastest fighter planes. They're made of WOOD! Literally—logs are flying—from the woods right into enemy strongholds. THAT is why America so desperately needs more saw logs,

more peeler logs, more pulp logs NOW! In addition to planes and gliders, there MUST be wood for thousands of invasion barges, pontoon bridges, sub chasers, shell cases and aircraft carrier decking. Logs are making munitions from nitro-cellulose to shell cases. Every logger can serve America best by sticking to his ax and saw... and by urging his logger friends who've quit the woods, to return to the forest fighting front!
