**Need Urgent for Hay, Pasture Seed**

The demand for hay and pasture seeds is still far in excess of current supplies and farmers are urged to harvest every pound possible to meet requirements in this country and in areas being rehabilitated abroad. Provisions of the Agricultural Conservation Program to encourage seed production are continued for the 1946 program, with a special congressional appropriation supplementing practice payment funds to help farmers harvest low-yielding acreage.

Farmers cooperating in the AAA conservation program may earn a practice payment to \$3.50 per acre for harvesting alfalfa, red clover or alsike clover, the three seeds needed most. In addition, the 1946 AAA conservation program provides payments of 7 cents a pound for alfalfa and alsike clover and 9 cents a pound for red clover on seed sold into commercial channels. The poundage payments are more than double the 1945 rates, giving evidence of the urgent need for farmers to save clover and alfalfa stands for seed harvest even though low yields are in prospect.

**HOW DO WE USE TREES?**

**Burned Trees Produce Nothing!**

Actually, more than 4,000 products use wood as their raw material. Forests are vital to our daily life. Because forests can be harvested and reproduced—again and again—they are a perpetual resource, provided we protect them from their greatest enemy, FIRE!
