How Standard "beefs up" cattle to help meet the West's growing food needs

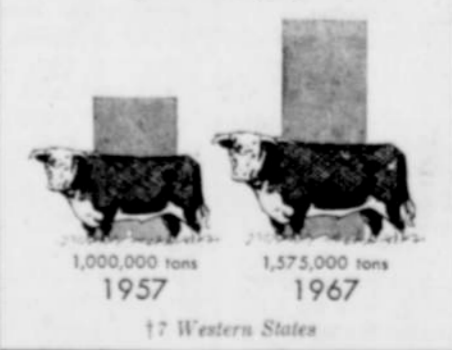

New Standard plant foods have produced twice as much beef from a single acre — enough extra beef to supply an average person for a solid year.

Who eats the most meat in the U.S.? You do—surveys show Westerners top the nation in meat consumption. Now Standard helps ranchers satisfy that hearty appetite with chemically blended plant foods,* so economical they can be used to turn unproductive foothills into profitable pasture-land.

These new blends of essential plant-growth elements come from a \$16 million Standard plant opened just a year ago. Grasslands they have enriched are now producing up to twice as much beef per acre. Farmers find them equally productive on many other crops. For you they promise tastier, more nutritious meals for every dollar you spend on food.

Progress in the West means . . . Producing 575,000 more tons of beef by 1967 to supply our growing population

*ORTHO PLANT FOODS are made and sold by Standard's wholly owned subsidiary California Spray-Chemical Corporation.

STANDARD OIL COMPANY OF CALIFORNIA plans ahead to serve you better
