IF BOAT "B" IS OVERTAKING BOAT "A" WHICH HAS THE RIGHT OF WAY?

Boat "A" has the right of way and will hold its course and speed. A boat approaching the course of another from a position more than two points abaft the beam of the leading boat is considered the overtaking vessel and has no rights. An overtaking boat re-mains an overtaking boat until she is clear of the overtaken vessel.

WHAT BOATS REQUIRE LIFE-SAVING EQUIPMENT?

The Oregon State Law on Boats and Boating requires all boats to carry at least one U. S. Coast Guard approved lifesaving device. Children and non-swimmers should always wear a life preserver or buoyant vest when in a small open boat. Statistics show that during 1960 and 1961 there were 28 lives lost in recreational boats on Oregon waters because the victims of accidents occurring in small open boats were not wear-ing a life preserver or buoyant vest. Further information on approved lifesaving equipment may be obtained by requesting "Safety Circulars" from the Oregon State Marine Board, 506 Public Service Building, Salem 10, Oregon.

Student Dancer Slates Return

Barbara Woodworth, Willamette University student, who danced her way into the hearts of 1961 Oregon State Fair goers, will return for the 1962 State Fair Free Talent show Manager Dean Melvin Geist announced today.

However, she has this week been selected for another honor which she will enjoy before the State Fair opens. She will be one of eight talented 4-H clubbers to perform at the National Association of County Agricultural agents at Las Cruces, New Mexico August 26-30.

Announcement that she was elected for this honor was made Thursday night at the Pike county pre-fair training program where she was a guest performer.

Earlier this summer the 4-H clubs of each state chose a number for the New Mexico event. These 48 numbers were eliminated to eight for the final talent show sponsored by Monsanto Chemical company at the NACAA. Miss Woodworth, who works summers in the Polk County extension offices at Dallas, will do a "Roaring '20s" dance.

She has promised Dean Geist, who is also dean of music at Willamette University, as well as manager of the State Fair Free Talent show, that she would return in time to appear on his program.

She is the daughter of Mr. and Mrs. William Woodworth of Grande Ronde and will be a junior at Willamette University this fall. The brown-haired, attractive 18-year old miss, is majoring in

State Welfare **Meet Attended**

Attending the state public welfare commission meeting, in Astoria, July 27, were Chairman Elmer B. Loyd, Mrs. Viola Hickey, Matt Erickson and Louis Wasser, all members of the Columbia county public welfare commission, and

Eva L. Tice, the administrator, Members from six other county commissions also attended the

state meeting. Procedures of the state commission were audited. Probably the most discussed items were aid to dependent children and the percentage reduction in that food program, which has been made necessary by limited budget.

Pages From Our Past

By Kenneth L. Holmes, writer historian

WHEN WAS THE LAST BABY ELEPHANT?

We went to see Packy and his mother, Belle, and the rest of the elephant herd at the Portland zoo recently. We suggest you do the same. There is simply no way to anticipate what your feelings will be until you experience this for yourself. We've known all along that big elephants come from little elephants, but until we saw for ourselves, we realize now, the idea was vague and undefined. When we stood before the window and saw the little critter in the flesh, rolling on the floor like a puppy, kicking his mother's leg, trying to figure what to do with his trunk while he nursed, experimenting with his trunk in the complicated process of moving a bundle of hay from the floor to his mouth - then we realized what a complex thing a baby elephant is, and what an amusing ham actor. There are three more baby elephants to be born at the Portland zoo in the

months ahead. In thinking about our column, "Pages From Our Past," and the necessity for writing about history, we naturally tried to find a way to draw the elephants into such a story. Here is how we did it: We asked the question, "When was the last elephant born in the Pacific Northwest?" And therein

lies a long, long story. You see, there were members of the elephant family in our region thousands of years ago: two branches of the family, mastadons and mammoths. There were se-

veral species of each. The first fossil find of such an animal was made by a trapper, Ewing Young, in December, 1839, along the bank of the Willamette river, near present Newberg, in

Young's own words, "about twelve feet under the earth." There were bones of an ancient bison, a giant sloth and a "fossil elephant." Ewing Young gave them to a New England seaman, Captain John H. Couch, of Middleborough, Mass., who took them around the horn with him and presented them to a friend back home, Dr. H. C. Perkins, a physician, Perkins studied the bones, made drawings of them, and wrote up the find for the American Journal of Science in 1842. This is generally thought to have been the very first reference to paleontogical discoveries in the Pacific Northwest.

Since that time many fossil elephantine bones have been found in our area. The mastadons and mammoths seem to have lived as contemporaries here during the great Pleistocene ice age, when an ice sheet moved south out of British Columbia into northern Washington. These were the last elephants to inhabit our area until the white man brought in specimens for zoos and circuses. Before the birth of Packy you have to go back through the ages into the past to find the birthdate of another elephant, but there were lots of them born in those days.

When did the last mastadon or mammoth exist? Dr. Richard S. Lull, a paleontologist of Yale university, wrote in a book on fossils in 1931 that mastadons were here "within the last thousand years or so." That is way too late. Phil Brogan, editor of the Bend Bulletin, and an expert on geology, says "as late as 20,000 years ago." The June issue of the National Geographic tells of a find in Wyoming of mammoth remains definately dated by the carbon-14 method at 11,000 years. A fine book

By Frank J. Laheney

QUESTION: Are all benefits taken at any age before 65 reduced by 20 percent?

ANSWER: The amount of reduction in benefits depends upon the number of months you are under age 65. At 62 this amounts to 20 percent. At age 631/2 the reduction would only be 10 percent.

QUESTION: I am a construction worker and during the year I sometimes work for as many as a dozen or more different employers. How can I be sure all of my earnings are reported for social security?

ANSWER: Each employer is required to report your earnings up to the maximum of \$4800 during the year. You can be sure that this is done by requesting a statement of your earnings every two or three years. You can do this by getting the postcard form at your local social security office or by letter. You will also find the social security booklet, OASI-855 helpful.

QUESTION: I am an employed wife. I do not expect to continue working until I am 62, but I do

entitled "Elephants," written by Richard Carrington (1959), says "Recent methods of dating fossil bones show what the true mastadons survived in North America until less than eight thousand years ago."

Well, anyway, it's been a long dry spell, and Belle broke it by presenting her precious 225-pound bundle of joy on April 14, 1962.

want to continue long enough to be sure that I will receive a social security benefit when I am old enough. How can I be sure of this? ANSWER: Your local social se-

curity office has a free booklet (OASI-855) which is designed specifically to help you with this problem. Ask them for it. QUESTION: We hired a maid in our home in October at \$20 a

week but she quit after three weeks. Since she did not stay any longer than that, do we still pay social security on her? ANSWER: Yes. If you pay a maid as much as \$50 cash wages in a calendar quarter (January-March, April-June, July-September, or October-December), a social security return is due on her.

The returns for the October, No-

vember, December quarter are

due by the end of January. You

can get a simple, envelope report

form from the nearest Internal Revenue Service office. QUESTION: Last March I was injured and have little prospect of returning to work. I understand I cannot receive disability benefits until I have been disabled at least six months, but if I then qualify for payments, there will be no reduction in the payment because I am under age 65. I am 64 years of age and could apply for reduced payments without waiting. I need the money - what

should I do? ANSWER: You should contact your Social Security office immediately for a full explanation of the rules involved. You will be given an estimate of the amount of payments under the disability provision and also the reduced benefit provision of the law. You can then figure in dollars and cents how long you will be ahead by receiving reduced benefits. In some cases, applications based on both age and disability may be to your advantage, which will also be ex-
