Rumbaugh, committee chairman; standing: Mrs. Wayne Welch, Mrs. Daniel Lawler, Mrs. Robert Curl, PTA president, Mrs. Robert Wendel, Mrs. Wm. Ostrander and Welcome Rumbaugh.

AROUND THE FARM

By Don Coin Walrod

Reed canarygrass, a forage species well known to most lowland farmers of Columbia county, probably is looked upon as a weed and pest more than a favored livestock feed. However, it wasn't always thus, and even now there are some situations where this grass contributes significantly to livestock feed programs.

Native to the northern part of both the eastern and western hemispheres, Reed canarygrass was cultivated first in Oregon about 1885. It was first introduced into Columbia county sometime between 1915 and 1920 where it found the exact conditions to which it is best adapted. This grass is especially suited to swamp or overflow lands, performing well on peat soils and on land that is too wet for other crops. It makes high yields in moist cool climate.

Reed canarygrass is a long-lived perennial grass that spreads by rhizomes. Plants tend to grow in dense clumps and they may reach eight feet in height. It furnishes abundant pasture where soil moisture is adequate as it starts early in the spring and continues until late in the fall. To be of much value it needs to be grazed closely, or cut early for hay; otherwise it tends to become coarse and unpalatable.

With improved drainage, other grasses and grass and legume mixtures which lend themselves to easier management have pretty well replaced Reed canarygrass. Very seldom is it planted in this area now, but still it persists and spreads.

Because of its adaptation to wet areas, this grass is currently causing considerable difficulty in the diking or drainage districts of the county since it often grows alongside and in the drainage ditches. When this happens, the flow of water is impeded, drainage of the land is less effective, and ditch cleaning costs are increased.

With the advent of modern herbicides, various chemical approaches to controlling the Reed canarygrass along ditches have been made. Because of the availability of equipment and the cooperation of the drainage district supervisors and individual farmers, we have done most of this work in the Beaver Drainage District, Clatskanie, Jess Lewis and Minkoff Hereford Ranch have been particularly helpful.

Various chemical companies have assisted in this project which has had a fair degree of success over the years. Trials established last June have seemingly given the best control to date, but until regrowth oc-

curing next spring is observed, we won't know for sure.

With Christmas just over, Christmas tree growers are already hard at work preparing their crop for the next holiday season. When calling on Don Pourtales, Rainier, a week ago to check upon some problems with Grand fir, we found him hard at work pruning trees in his plantation.

There are several methods of pruning the various species used for Christmas trees. They may vary some with each species, too, but the purpose is the same—to produce a tree of good symmetry, medium density and with whorls regularly spaced and close enough to give a pleasing appearance.

Scarring of the lower trunk, removal of lower limbs goes hand in hand with pruning practices as a means of controlling spacing between limb whorls and increasing density.

As word of caution about time of pruning, we must point out that while most species can be pruned now, this is not the time to prune the various pine species. Pines are best pruned in the summer when the growth of the candles is about half complete. The soft new growth of a pine is referred to as a "candle." Pruning is done by breaking or cutting out the tip of the candle. New buds will regenerate at this point, creating a tree with greater density and closer spacing of whorls.

The need for pruning of Christmas trees varies with soil fertility and depth and rainfall, as well as species. For most Columbia county areas, pruning of most species is almost a must. In general our soils, along with our abundant rainfall, are just too well suited to timber production to allow Christmas tree production without some cultural practices.

One alternative to pruning is selection of seed stock for Christmas tree type. However, this practice is readily accomplished since more study and research needs to be done. More work has been done on the production of timber trees.

This is tree planting time for woodland owners, Christmas tree growers, orchardists, and the homeowner. As far as our coniferous species are concerned, most of which are planted with bare-rooted stock, planting can continue through March. Weather governs how much later planting can continue.

State nurseries are the principal source of forest seedlings, but there are private nurseries that supply trees of different species or ages, classes somewhat different from that usually available from the state.

The state nursery at Elkton was inundated for a short period of time during the Christmas-time flooding. For a time there was some apprehension about how much damage might have been done to the seedlings, if any. After putting trees through a growth chamber it was ascertained that no damage was done, and the nursery is again shipping trees.

Supplies of two species, incense cedar and Chinese arbutus, are depleted. Growers who plan to order but have not done so should order soon, specifying date of delivery. Otherwise wanted species may not be available for another year.

The woman had spent over an hour in the dress shop, trying on everything in sight. "Why is it," she said peevishly, "I never get what I ask for in this shop?" "Perhaps," the weary saleslady replied, "it's because we're too polite."

GOLF VIEWS and NEWS

By Gordon Reed

The snow is finally gone from the golf course! We are keeping our fingers crossed and hope it stays away for the rest of this year.

For the first time since December 6, 1964 we had golfers playing last Sunday. Believe it or not, you have one of the few courses that was operating last Sunday due to past flooding, or high water in this part of Oregon.

Some new faces and a lot of old ones showed up for a round of golf on one of the nicest days we have had in some time.

Many of our friends have asked when Kay was coming home? I would like to say she is having a good rest and visit with her mother and friends in snowy Spokane and that she may be home very soon.

I can tell you this "batching" business is for the birds and I am almost tired of eating out of cans. I may send her a distress signal.

Also, quite a few potential paid up green fee golfers have asked me what happened to the ad I said would be in last weeks paper regarding this service. I told them they would probably see it in this weeks paper?

What does a golfer do when he goes on vacation? For sure he plays golf at every opportunity. Our first opportunity was on the Burbank, California "De Bell" municipal golf course. This course is rather peculiar. It is laid out around the knob of a hill which is like an overgrown ant hill about 150 feet high and covering about two square acres of ground. You drive up around it to the top, to the pro shop and starter's office and parking.

We checked in, paid our green fees and were told to put our carts in the car and push the button. Yep, we did just that and rode a cable car back down the side of this "Ant Hill" to the golf course.

Oh! Yes, they had had floods also that had cost them No. 6 and No. 7 greens. The started told us they were covered with over a foot of silt and debris, so if we played the front side or first nine of the course we should play No. 1 and No. 9 a second time to make our nine holes on the front side. So we decided to play the back side or start on No. 10 tee.

On this side of the hill you are looking down on Burbank with beautiful homes built right up to the edge of the golf course. There are hardly any trees around the course and not very much brush or shrubbery. The Pro told us that he watched a fire come over the hills from the right in back of the golf course this past summer which completely denuded the hills of brush and left only rocks and dirt.

So we played out No. 10 and played on up to No. 11. Remember now, we are playing golf in the city of Burbank with homes built right up to the course and we could look down, to where a couple hundred thousand people are working. As we turned away from No. 11 green to go over to No. 12 tee, I saw what I first thought was someone's dog, but on a second look it was a coyote scooting up over the rise onto the road and then across onto No. 1 fairway with people all over the place. Where he went I do not know, or for that matter where he came from.

Later, in talking to one of the greenskeepers, I questioned him about it. He said, "Oh yes, we have lots of coyotes on the course. The other morning we saw seven in one bunch."

He also said that they were troubled with deer and that the night before they had been playing on No. 12 green. (I saw their tracks later when we played that green.) He also told us that the week before up by the water tower (on the golf course) he saw a large mountain lion track.

I thought we had quite a lot of game around our course, but I certainly didn't expect to hear about that kind of game practically within the city limits of Los Angeles.

We did enjoy the course, and played this back nine several times before we left Burbank. They told us they did not expect to get 6 and 7 greens and fairways back in operation for a couple of months at least.

By the way, if you are ever in Burbank there is a very fine Hawaiian restaurant (dinner only) on top of the Ant Hill. The food is very fine, and the view of L.A. on a clear night is terrific.

Our next golf game was on the northern edge of Los Angeles as we were headed for Death Valley. More about the oddities of this course later.

Some learn from experience — others never recover from it.

PTA Prepares Adult Revue

"A Night at the Palace," an all adult revue for revenue, will be presented by the Vernonia PTA Friday, March 5 at 8 p.m. on the high school stage.

This family entertainment will have an all "star" Vernonia cast of over 50 singers and dancers, according to the general chairman, Mrs. Welcome Rumbaugh.

Assisting with the Palace production are the Mesdames Robert Wendell, handbills and stage settings; Wayne Welch and Robert Elton, tickets; David Banta and Neil Zimmerman, costumes; Dan Lawler, telephone; Robert Curl, programming; Robert Borders, posters; George Laws, publicity; Wm. Howard, stage properties and Ellen Hansen, programs.

Working on the entertainment committee are Mr. and Mrs. James Fiske, Mrs. Don Webb, Don Jackson, Lloyd Quinn and Wayne Welch. Mrs. Rumbaugh stated that a complete list of participants in the production will be released as soon as all acts are in full rehearsal.

BOWLING

WOMEN'S LEAGUE

Team	Standings	W	L
Quinns	5 1/2	2 1/2	2
Pills	6	2	2
Standard Oil	2 1/2	5 1/2	
West Oregon	2	6	

High series, Margaret Thompson, 544. High game, Gladys Sharar, 209. Splits picked up: Eunice Tovey 4-5-7, Dorris Krieger 2-6-10, Margaret Thompson 3-10 and 3-10, Margaret Berg 5-10, Nancy Leonard 3-10.

Goodwill Sets Date for Truck

The Goodwill truck will visit Vernonia Wednesday, February 17 according to Mrs. Frank Lange, local representative. The truck calls here the third Wednesday of every third month, so another call will not be made until May.

Persons who wish to have the truck call at their home to pick up articles of clothing, household items, toys or appliances may call Mrs. Lange at HAZel 9-3161 now.

The trick today is to get a job that doesn't pay enough for someone to invent a machine to do it.
