

SUPPLY AND DEMAND

The output of firewood from our mills is limited. Today there is an abundant supply and deliveries can be made promptly but from late summer on it is impossible for us to fill the rush orders.

But there are other advantages of buying now. The roads are good and hauling may be done at the least expense. Besides, to have a supply of this good wood for the cook stove in summer is just the thing.

Our wood makes an economical and convenient fuel and you should give thought to laying in a supply now. Get your neighbors to order with you and have at least a couple of cars shipped out at once.

CODDLING MOTH SPECIAL TOURS PAYETTE ORCHARDS

Horticulture Committee Investigates Work of Idaho Specialists in Control of Fruit Pests

The Farm Bureau committee on Horticulture and other interested orchardists of Malheur County, met on Tuesday the 18th at 9 o'clock at the Farm Bureau office in Payette, to listen to the report of Professor L. E. Longley, of the University of Idaho, explain the work of the Payette Bureau in better controlling the depredations of the coddling moth.

After spending an hour in discussion of the various features of the work, the party which consisted of Committee A. A. Reed and L. G. Willis of Brogan, E. E. Record of Riverdale, C. C. Hunt of Nyssa, P. F. Countryman of Cairo, and Messrs. Hickox and Gramse of Ontario, Wilcox and Davis of Oregon Slope, G. H. Bridwell of Jamieson, E. J. Patch of Riverdale, W. B. Eaton of Brogan, Professor Langley and L. R. Breithaupt, drove through the orchards of Payette County to inspect the cages in which the moths are being incubated in order to determine the best time to spray for the control of the worms with which everybody is familiar who eats apples.

A number of these cages were different communities and it was plainly demonstrated that there is considerable difference between the dates of emergence of the moths in different localities, according to differences in elevation and other factors which alter temperature conditions according to Professor Longley, it usually requires about two weeks time after the moths emerge until egg laying begins. The actual time of egg laying depends on temperatures. The moths do not fly in day time, but usually deposit the eggs about dusk. If the weather is cold, they will not lay at all but, if conditions are favorable—a temperature of about 60 degrees at dusk—the eggs will be deposited on the leaves of the apple trees. If spraying is not done then, the eggs soon hatch and the larva will soon enter the young fruit causing the wormy apples with which we are familiar. The losses from this cause amount to many thousands of dollars every year, no small part of which could be avoided by better knowledge of the right time to spray. The loss from spraying at the wrong time consists partly in wasted material as well as more wormy apples.

During the course of "after dinner" oratory which followed the noon feed at New Plymouth, the matter of what the Malheur County orchardists could do to help themselves along this line was discussed by several of the party. Professor Longley recommended that each committeeman arrange for three or four moth "tents" in as many different localities as there were distinct differences in elevation or other factors which would affect temperatures, and that these be watched in order to determine the time of emergence of the moths. With this information and by watching temperatures about two weeks after the moth begin to emerge, with a little checking up by the County Agent and the Horticulturist, pretty definite information could be obtained.

After visiting other demonstrations near Fruitland, the party broke up, but not without first arranging for another meeting to be held at Brogan during the fore part of June, at which time it is hoped to have Professor Longley on hand to check up on the work which the committee will have going to determine the time for the second spraying for the distinguished subject of this article. In regard to the first spraying for coddling moth, it was recommended by the specialist that it be done as late as practical just before the calyx closes. The poison must be gotten into the calyx and must remain there, and this is best accomplished when the calyx is nearly ready to close.

Again, Swat the Fly.

The number of bacteria capable of being carried by one house fly varies from 550 to 6,000,000. Hence a crusade against this pest which is most numerous during the season of the year when epidemics are likely to occur will play a great part in prevention and spread of any malady.

NOTICE IS HEREBY GIVEN: That all regulations (as per previous notice published) must be carried out for the use of water for irrigation purposes. Any violation of the rules, will cause the property owner to be placed under the meter system, and cost of meter and installation charged to said owner.

OWYHEE

BY OUR REGULAR CORRESPONDENT

Miss Maude Clark and her brother, Mr. Fern Clark left Tuesday evening for a visit with brothers and sisters in California. On Monday evening before they left a surprise party was given for them at the home of Grandma Bradley, by the young people of the neighborhood. The evening was pleasantly spent playing games after which refreshments of ice cream and cake were served. Among those present were: Vernon and Mary McGinnis, Verna, John and Oral Hite, Frances Robinson, Mabel Kuntz, Norman Smith, Edith and William Baldwin, Mildred and Clarence DeBord, Maude and Fern Clark and Mr. and Mrs. Chas. Bradley.

Mr. and Mrs. F. L. DeBord and family, Mr. and Mrs. Fred Klingback and family and Messrs. Lewis, Elmer and Clarence DeBord "Forded to Louis DeBord's homestead in the hills fifteen miles above Ironside last Tuesday, where they enjoyed themselves fishing and climbing mountains. While there they called on Mrs. Anna Pratt and son Louis who are holding down a homestead up there in that vicinity.

Owing to the fact that a number of the Nazarenes wish to attend the dedication of the monument erected in memory of the soldiers of Malheur County, who made the supreme sacrifice in the World war, at Vale on Decoration Day, there will be no Nazarine services at the school house on Sunday, May 30.

A picnic dinner was given at the school house Sunday, before services, in honor of the "Banner Class," which was W. W. Smith's class of girls and boys under 13 years of age.

Rev. Blom, of Ontario, preached after Sunday School. He announced that he would be in the east at his next regular preaching day, the fourth Sunday in the month, and that the pulpit here would be filled on that day by Rev. Loree, who was Baptist pastor here several years ago.

Mr. and Mrs. Frea Klingback last week sold their 65 acre ranch near Mitchell Butte to Mr. and Mrs. McNary, of Bend, Oregon. Mr. McNary has returned to Bend to ship over their personal property and stock there.

Mr. and Mrs. John Wall and family visited at the Lowe home Sunday.

The primary election was held at the school house on Friday, May 21. Those on the election board were Mesdames T. M. Lowe, W. B. Beam and C. D. Bigelow and Messrs. Ed Blodgett, John Bigelow and Doc Pullen.

D. P. Pullen visited Ontario on business, Monday evening.

Mrs. Ben Smith gave a picnic at Mitchell Butte Thursday for her daughters, Monna and Nina.

Mr. and Mrs. Lax and family, of Nyssa, visited at the Ben Smith home Sunday.

Mr. and Mrs. W. W. Smith have recently purchased a new Baby Overland car.

Mrs. Floyd Harding, of Boise, is visiting her sister Mrs. Claude Smith, having arrived Wednesday.

Mrs. J. W. Robertson is visiting her daughter, Mrs. Geo. Glasscock.

Emma and Viola Glasscock are visiting their aunt, Mrs. F. E. Newbill, of Ontario, this week.

Getting Rid of House Pests. Cockroaches or the "croton bug" may be held in check by setting out two snucers, one containing a mixture of flour and plaster paris and the other filled with water. The mixture should be four parts plaster of paris and one part of flour. Badly infested apartments may be thoroughly ridged of this pest by fumigating with hydrocyanic acid gas.

No Need to Repeat it. Raymond had played until he was overly tired, and when he went upstairs to bed his mother called after him not to forget his prayers. Listening, she overheard the following uttered in a sleepy voice: "Dear God: I'm awfully tired; so my prayer tonight is the same as last night and you remember what that was, Amen."

MANY WOMEN USE GLYCERINE MIXTURE

Nyssa women will be surprised at the INSTANT pleasant action of simple glycerine, buckthorn bark, etc., as mixed in Adler's. One spoonful relieves ANY CASE of constipation or sour stomach. Because Adler's sets on BOTH upper and lower bowels it often cures constipation. vents appendicitis. One lady reports

A Mower You Can Keep in Good Cutting Order

When the cutting parts of a mower get out of kilter mower troubles begin—poor cutting, heavy draft and excessive wear usually result.

One of the big advantages of the John Deere Dain Mower is the ability to keep the cutting parts in good working order during the life of the mower. The next time you are in town take time to come in and let us show you why you can get good work out of your mower for years to come.

For instance, you don't have to tear down the mower or send it to a blacksmith shop to re-align the cutter bar or re-center the knife—two simple nut adjustments that can be quickly and easily made right in the field do the job. And the adjustments can be made accurately and they stay made.

Come in—it's to your advantage, to know all about this mower before you buy. While at our store, we want you to see the rest of our line of heavy and heavy-duty machinery. We have a line of machinery you can use with satisfaction and profit.

Another thing—the John Deere Dain is a mighty easy mower to operate. The powerful lift enables you to raise the bar easily in passing over obstructions or to extreme height. A foot lift working in conjunction with the hand lift makes the mower lift easily.

You never have to back up to get a start in even the heaviest hay. The knife starts cutting the instant the knife is lowered—no lost motion.

You will see big advantages in the drive on this machine—it's extremely simple—the gears are so placed that one set holds the other set in mesh constantly.

The John Deere Dain is the simplest, most powerful and best-built mower we have ever seen. We know it will appeal to you.
