Home Pointers

While strawberries and cherries ordinarily do not contain enough pectin to make firm jelly, this can be accomplished by adding pectin extract. Strawberries will often jell perfectly with the addition of one tablespoon of lemon juice to each cup of strawberry juice.

Jelly which doesn't contain enough sugar will be sugary and tough, while too much sugar makes it sirupy and runny. The correct amount for most kinds of fruit is from three-fourths to one cup of sugar to one cup of extracted juice.

Jelly is cooked enough when it is so thick that it makes heavy drops that run together before they fall from the side of a spoon.

The common method of allowing a little of the juice to cool on a plate to see if it will jell allows the jell that is still cooking to be overdone.

Less of the natural color and flavor of the fruit will be lost in making jelly if only a small amount, usually not more than 4 to 6 cups of juice, is made up at once. The evaporation of moisture is quicker and the time for cooking is consequently shorter.

It is poor economy to can foods which are available at reasonable prices most of the year in the fresh state.

The poisonous botulinus organism cannot grow in canned berries because of their high degree of acidity. Most of the spoilage of canned berries comes from molds or yeast, either of which can readily be killed at below boiling temperature.

Farm Pointers

While hay can be put into the stack slightly undercured, it cannot be baled in that condition, as most farmers know. Hay put into a stack will sweat, but when compressed into a tight bale, it will not only sweat but will also spoil, says the Oregon Experiment station.

Means of providing green summer pasture to carry the dairy herd through the hot dry summer months are discussed in a new bulletin, "Irrigated Pastures for Dairy Cattle," by I. R. Jones and P. M. Brandt, just off the press at Oregon State college, and ready for distribution free upon request.

Succulent feeds, such as green pasture crops, silage, roots and kale, in addition to their actual feeding value, serve as tonics to the digestive systems of the animals consuming them, says the Oregon Experiment station.

The advantages and disadvantages of electric brooders for chicks and young turkeys, together with methods of installation, costs, etc., are discussed in Oregon Experiment Station Bulletin No. 262, "Electric Brooders," by F. E. Price, A. G. Lunn and F. E. Fox. This bulletin is now ready for distribution and will be mailed free upon request, or can be obtained from county agents.

When hay is shocked for baling from the field it is advisable to bale it as soon as it is thoroughly cured, says the Oregon Experiment station, rather than allowing it to stand in the field for a couple of weeks. If waiting for a bailer is necessary, it pays to stack the hay.

Infant Imagination

Little Muriel was gazing from her bedroom window up into the sky and asking mother innumerable questions about the heavens. Suddenly a shooting star flashed across the firmament. With a gasp of astonishment Muriel turned round and exclaimed, "Oh, Mummy, look! God's striking matches!"

Defining Boundaries

To beat the bounds means to trace out by perambulation the bounds of a parish by striking with a rod certain points in passing by way of calling to witness. This is an old custom still kept up in many English parishes by going around the boundaries on Holy Thursday, or Ascension day. In Scotland beating the bounds is called riding the marches.
