Poisoning Pocket Gophers in Malheur County

Mixing the Bait Mix one ounce strychnine alkaloid with one-eighth ounce saccharine. Dust over 16 quarts of sweet potatoes, carrots or parsnips. These baits are peeled and cut into 1-2 inch by 2 inch cubes and thoroughly dusted with above mixture.

Placing the Bait In placing the bait the runway of the gopher may be opened by means of a shovel or garden trowel, digging from the mound into main runway of the gopher, there placing one piece of this baited sections, these baits may be placed by means of a probe. When the probe is used do not probe closer than six inches to the mound so that the main runway will be located. After the runway is located, remove the probe, placing one piece of bait in the runway. Place a covering over the holes to shut out the light. Care should be taken not to let any loose dirt fall on the bait; cover with clod or grass to prevent this. Effective poisoning cannot be obtained if any light penetrates the gopher runway. If the ground is thoroughly poisoned three times, with intervals of about ten days between poisonings, better than ninety per cent kills should be obtained.

Caution All uncleaned utensils used in preparation of poisons and all poison containers should be kept plainly labeled and out of reach of children, irresponsible persons, and livestock. Any unused bait should be burned.

The lands of owners failing to comply with the above order shall be entered upon by a person or persons appointed by the County Court to eradicate and destroy pocket gophers on any such lands within the above described districts.

The cost of such work consisting of poison bait material and labor shall be held by the county as a lien upon the property treated by the person or persons appointed by the County Court.
