 Estate of Joseph Kelly 55-41.
 Guardianship of Barbara L. Johnson, 59-41.

but one signed up with the Grange. That was was strongly in favor of a Grange but the notice was so short and it caught him financially embarrassed. It takes two dollars in hand to join the Grange.
 The organizer will be back this Thursday and the final touches will be put to the organization.
 Dale Limbaugh, Chuck Share and Roy Manley each have some small left-over fields that they want Elm Niccum to tractor plow for them for corn. The getting plenty late now or to plant corn. Still the first year we were out here we planted corn way up in June and we sure appreciated the feed it made.
 Jack Parker is now in Oakland California, according to his dad Jack's big ambition is to become a welder. We hoped that Jack would of stayed and become a farmer for Jack has got what it takes. His dad says Jack is pretty long-headed. And indeed he is too but ready-money looks good to these young folks and these Cow Hollow farmers are rather short on ready money.
 Canadian thistles are rapidly becoming our pet-pest in this country. When we settled this country there were two patches of them on the farm taken by Mort Wilson. Homestead taken by Mort Wilson. They were up on the west side of two deep washes cant figure how they even got in a place like that unless some seed had been brought in by some sheep man in some hay for his pack horses.
 Canadian thistles dont scatter from seed bed. The county agent says that there wont one seed out of a thousand grow. They spread very bad from the roots. A patch will spread from ten to a hundred feet per year and it is mighty hard to get them killed out. There is no checking them. The only way is to completely kill them.
 Many people confuse the Swedish or Bull Thistle for Canadian thistle. There is a resemblance in looks but a great difference in character. The bull thistle is a nuisance and spreads badly but if you cut it off at the top of the ground it is done for. But not so with the Canadian thistle. If you find one on your farm that the seed has blown in and got a start, you cut it off at the top of the ground and come back in a month and you will find a half dozen around there.
 The county agent told Mort Wilson that if he let those thistles go a few years that the damage they would do would be greater than the present value of the farm.
 That was three years ago and now most every farm west and south of him for a mile or two has or has had Canadian thistles on it. On our farm have found from one to six plants every year since then.
 If you find one or two single plants and you dig down from one side a-half to two feet and get all the tap root out it is not liable to come back. But watch the place and if another one does come back get it quickly. Have got them all on this farm through that process up to now.
 There is another weed grows here that is quite harmless but when small say four inches high is an exact resemblance for the Canadian thistle. George Gabriel calls it the milk thistle. You pinch off a leaf and it will bleed a milky substance. In reality it is only a freak Chinese lettuce plant.
 The best and only safe way to tell a plant you suspicion of being a Canadian thistle is to first pinch

pose the date of the next dance at this hall for another week as the present date of May 23rd, would be the night preceding the regular dance at the Sunset Valley Hall. Two nights straight is a little too much dancing for an old Cow Hollow farmer. So one week later on May 30th we will all be rairing to go again.
 In Wyoming
 Luther Pife spent from Saturday until Wednesday at his construction job at Cody, Wyoming.

Save Food Now for your Winter Meals

Cow Hollow

By The Happy Farmer
 Cow Hollow has gone Grange minded now. When two of our farmers meet. You can soon see them sitting down, perhaps on the ground (Our faithful resting place). You bet your bottom dollar they are discussing Grange.
 Some time ago we all received notice by mail that they were going to organize a Grange at the Sunset Valley Community Hall on Tuesday night May 6th. Several Cow Hollow farmers went over as they wanted to be a Grange member and no one doubted that the Sunset Valley Community hall was the proper place for the Grange.
 It seems that the time was not quite ripe, for they argued pro and con until the meeting finally broke up and everybody went home as there was no Grange organized.
 The organizer and several others were rather disappointed as the nearest Grange was at Oregon Trail and was overpacked with members and there are many others that would like to attend Grange.
 Wednesday afternoon the organizer met Ed. Jameson and was discussing their disappointment with him. Ed is a member in good standing at the Oregon Trail Grange.
 Ed asked "Why don't you try the Cow Hollow Hall?"
 "Haven't time now" was the organizers reply. "I got to be in central Oregon over the week end. Got a meeting scheduled there for Friday night."
 Ed. told him of the Cow Hollow hall a large 34 by 40 hall with a full basement. Already equipped with a range and two twenty foot tables and lots of benches.
 "These people over there are rather peaceful" he adds.
 It was decided to give it a short try. Edd got into the car with him and they came up into the hollow and saw Roy Manley, Ezra and Clarence Niccum and George Gabriel by that time it was night but they thought it might be done even on so short a notice.
 Thursday afternoon the organizer came back and picked up Chuck Shore and they went up the hollow and saw a few folks and every one was in favor of a Grange. They told them to meet that nite at the Hall and if they could get notice to enough people they wanted to try to organize here.
 Not many know about it as the time was so limited but all present

Plus power for '41 engines... NEW Solutized SHELL

TWO SCIENTIFIC FACTORS advance the Road Performance Rating of new Shell Gasoline to an all-time high:

- It is refined with the Solutizer Process (originated by Shell's research laboratories, Patent No. 2,149,379). This steps up gasoline performance by removing the "pro-convulsant mercaptans."
- Thermal conversion makes it extra rich in iso-compounds similar to iso-octane—first produced commercially by Shell scientists to give America 100-octane aviation gasoline.

Your Shell dealer has the new Solutized Shell (at regular price) and Shell Premium—try a tankful today!

Out of petroleum —CHICKENS

VITAMIN E is being added to commercial poultry feeds to make hens lay better and increase the "hatchability" of eggs.

Scientists at the "University of Petroleum," Shell's \$3,500,000 research laboratories, observed some peculiar crystals in a new product they had made from petroleum... crystals that proved valuable in the artificial creation of Vitamin E—essential to animal fertility!

Also in petroleum, Shell scientists have found a key to synthetic rubber—glycerine—fertilizers—plastics—scores of needed things. These are by-products of their main assignment: finer Shell Gasoline.
