family of Buhl, Idaho, spent Sat-urday night and Sunday as guests of Mr. and Mrs. Wesley Piercy.

**The Choice and Management of An Electric Range for the Farm**

Comfort and health are enhanced when meals are cooked electrically.

By IRA MILLER  
Farm Electrification Bureau

TODAY, about three times as many farm families with high-line ser-vice have electric ranges as enjoyed them three years ago. Indicative, as these figures are, of the superiority of electric cooking, just what should the farm wife look for when buying an electric range? As she should be considering only a range of high-grade construction, about the only details left for her to think about are the surface units, oven and refine-ments.

There are several types of surface units, for each of which certain ad-vantages are claimed. Check them and choose the one that best suits your requirements—the type of cooking utensils you use will have an impor-tant bearing on your choice. Unless you must cook an unusual variety of foods for a single meal, three surface units probably will be enough. One of the units should be large and have a rating of 1800 to 2000 watts, the others small and rated at 1000 to 1500 watts.

Factors affecting the cost of using the oven of an electric range include: The thickness and kind of insulation used in the walls; whether or not the door fits tightly against the frame when it is closed; its size; and the kind of lining.

Refinements include oven tempera-ture indicator, automatic timer, lamp, condiment jars, deep-well cooker and warming compartment. The frequency with which these various accessories

will be used should determine whether or not they are worth their added cost.

Correct management will result in properly-cooked foods with the mini-mum consumption of electricity. Five of the most effective means of saving electricity when cooking are:

1. Use the high wattage of a sur-face unit only to bring foods to boil-ing. As soon as boiling begins, turn the switch to low or, if that position will not maintain boiling, to medium.
2. Shorten the time required to start boiling by putting a cover on the pan and by using very little water to boil vegetables—one-half to one cup is usually enough.
3. Always use a pan that complete-ly covers the heating surface of the unit—one with straight sides and flat bottom is preferable.
4. Do a—much of the cooking as possible while the heating units and oven are hot.
5. Plan to cook more than one food in the oven each time it is heated.

Before purchasing any electric range, talk about and look at the various makes until familiar with the advantages and disadvantages of each. Then check the following points with your farm friends who have electric ranges: What difficulties, if any, they have had with the oven or surface units; how often replacement of heat-ing units are necessary; what new heating units or parts cost; how promptly replacements or repairs are made; and what features of the range they particularly like or dislike.

Thompson, Mrs. Samason, Mrs. Ralph Jones, and Mrs. D. W. Mc-Ginnis.

Mrs. R. H. Johnson was hostess at her home to a party for the children. Those there to enjoy the games and refreshments were Rose Marie Graham, Dorothy LoLe, Es-telle Osbourne, Norman Hand, Le-on and R. H. Johnson, Luanne Gonnason, Ellen Ann Herman and Lois De Lashmutt.

**Notice**

**TO OWNERS OF TODAY'S HIGH COMPRESSION CARS**

**SHELL Premium GASOLINE**

As your new car piles up mileage, your high compression engine increases in compression. Even inside the first 10,000 miles, tests show, this increase can cause knocking and engine sluggishness. And this can happen to any car on the market today.

The cause of this is carbon—which cakes inside today's compact combustion chambers, reducing their size. You can't avoid such carbon deposits completely, no matter what kind of gasoline or oil you use.

Shell scientists have developed a special type of gasoline—Shell Premium—that will auto-matically compensate for these carbon-created higher and higher compressions.

This super motor fuel will produce maximum knock-free power in the highest compressions your engine can develop. Because Shell Premium is a special blend of clean-burning gasoline fractions . . . a patented, scientifically prepared anti-knock compound . . . and powerful alkylate (similar to that used in 100-octane aviation fuels).

Whether your car is new or old, Shell Premium will give you greater power when you want it . . . new handling ease in traffic . . . cooler running. And to top all this, excellent mileage.

Shell Premium costs 2¢ more than "regular." But if you drive the average amount, Shell Premium will cost you only about \$1 a month extra. We recom-mend Shell Premium for the extra miles of new-car performance it can give you. On sale at Shell Dealers and Shell Stations.
