How would you
CHART YOUR COURSE?

Pictured here are the records of four "life lines" of our business—four things which largely control the destiny of any business, whether it be a farm, a factory or a store. They are Wages, Materials Costs, Prices, and Profits. Suppose these were pictures of what is going on in your own affairs. How would you chart your future course from these facts?

With the proposed increase, wage rates will have risen from \$0.85 1/2 per hour in 1941 to \$1.33 1/2 in 1946—a gain of 56.1%. Weekly average would be \$53.40.

By the end of 1945, prices on all commodities other than farm products, and food had gone up 19.9% since 1941. Chart does not show effect of 1946 increases.

Using U. S. Bureau of Labor Statistics with 1941 prices equaling 100, prices of farm machinery in 1945 were only 104.9.

Profit per dollar of sale has declined until in 1945 it was slightly less than four cents, as against 8.4 cents in 1941.

What about wages?

Wages have risen steadily for five years. Before the strike which began on January 21 in ten of our plants and which has choked off nearly all farm machinery production, earnings of employees of these plants averaged \$1.15 1/2 an hour, not including any overtime. The Union demanded a 34 cents per hour increase and a Government board has now recommended a general increase of 18 cents an hour, which would make average earnings \$1.33 1/2 an hour. Weekly average would be \$53.40.

What about materials?

No one seems to know how high materials costs will go. The Government has increased steel prices as much as \$12.00 a ton, with an average increase for all grades of 8.2%. Steel is the most important material we buy, but prices on other materials are also increasing.

What about prices?

There has been no general increase in our prices since they were frozen by the Government in early 1942. Since then a few small increases have been allowed where particular machines were substantially changed in design.

What about profits?

Risk is part of the American profit and loss system, so we do not, of course, ask either our customers or the Government to guarantee that we can be certain of profits each year. The chart tells the story of our profits during the war. Although Harvester produced more goods than ever before, it had no desire to get rich out of war, so our rate of profit has steadily gone down. What our 1946 profit will be is extremely uncertain.

What is the next step?

As you can see, our present situation is that with frozen prices and declining profits, we are asked to pay higher materials costs and to make the biggest wage increase in the history of the Company. Can we do this?

Wages and materials consume all but a few cents of every dollar we take in. If our prices continue frozen, and cost of wages and

materials continues to rise, obviously our Company will begin to operate at a loss at some point.

The exact point at which operating at a loss would start is a matter of judgment. Government agencies and union leaders may have opinions as to where that point is. But if they turn out to be wrong, they can shrug their shoulders and say: "Well, it wasn't my responsibility. I didn't make the decision."

The management of this Company cannot and will not say that. It dares not gamble. It has to be sure. Continuation of our service to millions of customers, the future jobs of thousands of employees, and the safety of the investments of 39,000 stockholders depend on our making as correct a decision as is humanly possible.

What about future prices on farm machinery?

The judgment of Harvester's management now is that we cannot safely make the huge wage increase recommended by the Government until the Government authorizes adequate increases in the prices of farm machinery to cover the resulting increased costs.

That is not a judgment that makes us happy. The Company does not want to raise prices. We prefer to lower prices, when possible, and we know our customers prefer to have us do that. We have produced at 1942 prices, and hoped we could continue to do so. We have delayed seeking general price relief in the hope that it could be avoided. Now we are convinced that it cannot be avoided any longer. The price question must be settled. Until it is settled we do not see how we can settle the wage question. Until the wage question is settled we do not see how we can resume production and begin turning out the farm machines which we know our farmer customers need.

Because of the important stake which both farmers and city dwellers have in this controversy, we are bringing these matters to your attention. Through the cross currents of today's conditions, we are trying to chart a course that is fair to our employees, to our farmer customers, and to our stockholders.

INTERNATIONAL HARVESTER

You have heard of DDT, the "miracle killer." Purina research has developed a plan for using DDT that is both effective and low cost.

1. PURINA FLY SPRAY FOR FARM BUILDINGS. Two applications a year keep down flies in the barn.

2. PURINA FLY SPRAY FOR DAIRY CATTLE. Should flies come into the barn on the cows, this quickly kills and repels them.
