NYSSA NEEDS RECREATIONAL FACILITIES

Nyssa' need for a swimming pool and other outdoor recreational facilities has attracted the interest of the women of the community, giving hope that some program can be developed.

The women have asked the city and other organized groups to assist in the project and have received sympathetic response. However, little can probably be done this year in the way of construction, but the groundwork can be laid for actual development of the project next year.

A program of supervised play for the younger children of the city could be effective the remainder of the summer, if the project were started immediately. Women experienced in such supervision are available in Nyssa.

The Nyssa city park is developing into a beautiful spot, and could be made into a recreational center. A swimming pool large enough to accommodate a considerable population during the hot summer months and two or three tennis courts should be constructed at the park. In addition, more tables and benches for family picnics and other gatherings would be very desirable.

Probably the city and perhaps the school district will be called upon to finance the construction of a swimming pool and other major recreational facilities. Construction will most likely have to be financed by special financing because of the amount of money involved. The project could be financed along with the proposed improvement of the city's streets and water system.

U.S. Plans For Buying Are Given Publicity

(Continued From Page One)

U. S. Number one grade, \$1.45; U. S. Number one grade, size B, .60; U. S. Number two grade, 1-7/8 in. minimum diameter, .60.

"Potatoes delivered in bulk must be weighed and a weight certificate shall be furnished at vendor's expense.

"Purchases will be made only from growers, co-operative associations of growers, or their authorized agents, or dealers certified by the state potato committee. Vendors are cautioned that in making sales to the government and in submitting claims for payment for potatoes delivered to the department, they must disclose any liens that may be outstanding against the commodity.

The following commodity advisory committee, in addition to the county agricultural conservation committee has been selected to advise and assist the production and marketing administration in the purchase program: Glen Hutchinson of Ontario, chairman; Ira Ure, Nyssa and Ralph E. H. Stansberry, Harry R. Sandquist and J. O. Jagger of Ontario. Interested parties wishing to sell potatoes to the department or desiring further details relating to the program should communicate with a member of the commodity advisory committee or other officials.

GREATER ALFALFA ACREAGE IS ASKED

"Acreage of alfalfa in Oregon has been reduced in recent years because we haven't had enough seed of adapted strains," said Harry Sandquist, county agent, today. He said that this has not only been true locally, but nationally. The U. S. department of agriculture is asking growers in all of the northern states to increase production 89 per cent over last year.

Alfalfa seed yields have in the past been very spotted and undependable due on the one hand to lack of pollenizing insects and on the other hand to the presence of harmful insects. In this county the lygus bug is a small insect that sucks the juice from the flowers, leaves and stems of alfalfa and prevents seed from setting. Plans are underway to treat some acreage in the county with DDT to control this insect that is alone responsible for completely destroying the seed crop on many fields.

"We haven't so much control over the beneficial wild insects," Sandquist said. "They nest in unplowed land, such as sagebrush flats, steep creek banks, sides of canyons and other places where vegetation is scanty. Alfalfa, therefore, usually yields more seed if it has unplowed land on one or more sides of the field.

"The government is asking a special payment to induce farmers to harvest small low-yielding fields that would not be harvested otherwise. Details of this plan are available at the local P. M. A. office.

Growth of Cities Shown in Area

(Continued From Page One)

lands become "worn out, the more this area and other similar areas will become the "have" areas and should be the processing.

"There are two essentials to establishment of an industry. Other things are very desirable, but you first must have an aggressive individual and he must have an idea."

Mr. Mayer urged that local people take the initiative, but he added that they need encouragement.

"If we knew as much about our common minerals as we do about uranium, scientists say we would

have opened an entirely new field." Mr. Mayer urged people to know the facts about their towns. He said the buying power, for instance, of the lower Snake river valley is \$187,000,000. He gave other figures and said "that is what industries want to know."

"Only by being on our toes can we get these industries interested in our area."

Mr. Mayer said after the report given by Mr. Morgan that Nyssa would soon reach 5000 population. The growth, he stated, is inevitable.

The members voted to hold their next meeting in Caldwell September 16.

In addition to Mr. Morgan, Nyssa residents attending the meeting were Bernard Frost, secretary of the associated chambers; A. L. Fletcher, Arden Newsom and Klass V. Powell.

Adrian

The Adrian Community canyery will be closed the week of July 29 to August 3 as Mrs. Reuter will be in attendance at an agriculture instructors conference in Waldport, Oregon.

Mr. and Mrs. Kermit Dille and family of Weiser visited in the R. E. Dille home Sunday.

Mrs. Herbert Thomas of Adrian and Mrs. George DeHaven of Kingman Colony were called to Weiser Tuesday morning to take Mrs. W. B. Yardley to the Ontario hospital. Mrs. Yardley is Mrs. Thomas' sister and Mrs. DeHaven's mother.

Mr. and Mrs. Vernon Parker and children left Tuesday for a few days of fishing at Strawberry lake.

Howard Hatch returned from Portland Tuesday evening. He tried to buy some new buses for the school district but was unsuccessful.

LOCAL NEWS

Help Wanted

The Bridgford company, Frozen Food Division, Ontario, Oregon, needs 300 women to register for work at plant during corn harvest. Work will start about August 1. Apply immediately to main office in Concolidated Freightways building or direct to the plant.

1916 THIRTY YEARS OF FARM ELECTRIFICATION

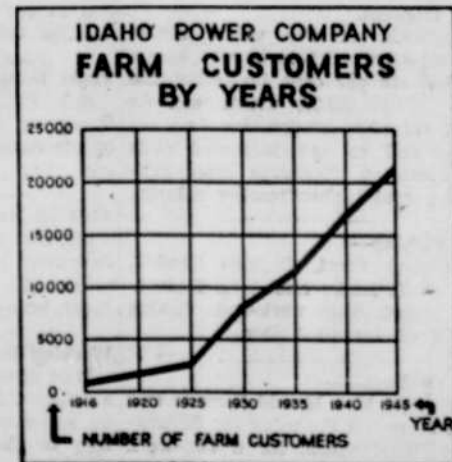

Farm Homes Have Electrical Comforts and Labor Saving Devices of Town Life in the Snake River Valley

Nowhere does electricity mean more in labor-saving, convenience and comfort than on the farm and in the farm home.

Here in Snake River Valley farm people are accustomed to having and using lots of electricity—more than 90 per cent of all farms in the area served by Idaho Power Company are electrified. When you drive along the country roads, notice the miles of electric distribution line—you'll have a hard time finding farms without electricity.

Farm electrification benefits country people and town people alike—the things contributing to prosperity and welfare on the farm reflect in better business for towns and trading centers. Idaho Power is proud of its part in this program of making Snake River Valley a better place to live—a better place to farm—a better place to do business.

Just now, Idaho Power Company is engaged in completing its job of farm electrification as rapidly as materials and man-power can be provided. Approximately 1,000 miles of line are scheduled for early construction to serve the more remote parts of our service area. Some of the farm lines we are building are nearly a hundred miles away from any town of more than 200 population.

Idaho Power is a Leader in Farm Electrification
