FIRESTONE TIRE IS INTRODUCED

The new Firestone champion ground grip tractor tire, which by record-breaking performances in pulling power, endurance and cleaning tests assures farmers of shorter working hours and lower operating costs, according to Don B. Moss, owner of the Don B. Moss Firestone dealer store, who recently saw the tire demonstrated in Los Angeles.

"Unique in its patented curved, triple-braced traction bars and flaring shoulder blocks and spaces, the new tire in tests on all types of soil and surfaces cleans up to 100 per cent more effectively, delivers as much as 62 per cent more power at the drawbar, and gives up to 91 per cent longer life than tires having straight, open center traction bars," Moss said.

The shearing action of the curved traction bars in thrusting off mud and litter is a constant force as the tire rolls.

"Farmers also will find that the new Firestone tire is completely versatile. While the extra-deep, wedge-shaped traction bars provide a firm center bite on soft ground, on paved roads the wide continuous tread design gives smooth, comfortable riding. Since a greater tread area is in contact with the ground, stability is increased and wear is minimized."

"The champion ground grip tire stands as another contribution made to power farming by the

Firestone company in the last 15 years. In 1931, Harvey S. Firestone, founder of the company, put the farm on rubber when he introduced the first practical pneumatic farm tractor tire."

"This tire has fully justified the years of research and development which our engineers have devoted to it," Harvey S. Firestone, Jr., president of The Firestone and Rubber Company, said in introducing the new tire. "It will enable the farmer to do more work in less time at lower cost."
