DAIRYMEN YOU CAN USE DDT!

The federal security agency and the department of agriculture issued the following statement on April 5, 1949 after a meeting of the principal government agencies concerned with the utilization of DDT in the national and international health and economy.

"A number of statements have been published during the last several days which have misled and alarmed the public concerning the hazard of using DDT as an insecticide... The food and drug administration has not prohibited the use of DDT in spraying dairy cattle and barns... There is no justification for public alarm as to the safety of the milk supply from the standpoint of DDT contamination."
