Bale - O - Matic

IS THE BALER WORTH WAITING FOR

The new Bale-O-Matic is just what the name implies—an automatic hay baler that picks up the hay, slices and ties it into firm, square bales with two steel wires, while hay is under compression. To accomplish this, the only manpower required is the tractor operator. The Bale-O-Matic delivers the bales to the rear of the machine, where density and weight of bales can be varied to suit owner.

An automatic metering device gives you an accurate count of bales, and a star-wheel control assures that each bale is approximately 40 inches long. The Bale-O-Matic is power driven with an air-cooled, four-cylinder engine, and is equipped with two pneumatic tired wheels. It can also be used as a stationary baler.
