it's easy to put this much
sugar into one cup
BUT HOW
WOULD YOU MIX IT
IN 5,330 CUPS?

a problem of the same proportion is facing most
feed companies in mixing about 1/3 oz. of
stilbestrol into one ton of cattle feed

The Food and Drug Administration in its approval for use of stilbestrol has set about 1/3 oz. per ton as the right amount for this powerful growth stimulant. That means it is added in the proportion of only 1 part to 90,800 parts. It must be mixed so that cattle get just the right amount . . . too little stilbestrol in their ration won't produce maximum gains . . . too much in their ration can prove toxic. Yes, it is a big mixing problem for most feed companies—but not for Purina, with its exclusive Micro-Mixing process.

MICRO-MIXING is accurate to the 1/10,000,000 part!

Modern mixing equipment plus the technical skill of Purina engineers, laboratory technicians, and mill employees makes such a mixing job routine for Purina. Purina's Micro-Mixing is a quality control process that assures you every bite is mixed just right. Every animal gets its fair share when you feed Purina Steer Fatena or Beef Chow with stilbestrol added. That means that you go to market with a much more even bunch of cattle.
