New Sewer System Subject of Report

posed at Ehrgood and the railroad to replace the existing pump station. This pumping station is the bottleneck of the entire collec-tion system. All sewerage in the present system must go through this station and be raised and passed under the railroad, then plant. Pumps at the station are not sufficient in size to handle the amount of sewerage passing through the station plus the fact that the mechanical condition of the pumps is such that a complete breakdown of the pumps could happen at any time, resulting in a complete stoppage of sewer use for as long as five hours while repairs were being made.

Installation.

The north end pump station at Beech and the railroad is estimated to cost \$18,600, and will be general obligation. The low pressure line running south from Beech to Ehrgood is estimated to be \$12,300, making a total general obligation for the north end sewer use for as long as five hours while repairs were being made.

Installation.

The north end pump station at Beech and the railroad is estimated to cost \$18,600, and will be general obligation.
