Trucks Carry Fingerlings Around Dam

OCEAN-BOUND SALMON and steelhead fingerlings once again are moving downstream in the Snake river from spawning grounds to be given safe passage around Idaho Power company's Brownlee and Oxbow dams. Here some of the young migrants are loaded into one of Idaho Power's seven custom-built trucks, equipped with special aeration and refrigeration devices, that will haul them 15 miles downstream for release below Oxbow. The fingerlings, collected by three unique "skimmers" spaced across the facility's vast plastic-mesh net, are transferred to this truck-loading station through a water-filled pipeline by means of a complex pump system. Adult steelhead are beginning to move into the utility's upstream migrant facility at Oxbow which also is a part of the two-way fish passage system of Idaho Power.
