# **APPLY NITROGEN NOW**

put crop residues to work for extra profit

Fall-applied USS Nitrogen plowed down with crop residues can increase your profits! Nitrogen speeds the decomposition of grain stubble, corn stalks, potato vines and other crop residues. Nitrogen helps transform residues into soil-building organic material by spring. The result: Greater soil productivity and higher profits for you.

How much nitrogen? Research shows that about 20 pounds of available nitrogen is needed to decay one ton of residue. Therefore, 60 pounds of nitrogen is required to handle the straw produced from a 60-bushel small grain crop. For best results, apply the recommended amount of nitrogen for the crop to be grown, plus the additional amount required to decay the residue to be plowed into the soil.

Apply nitrogen this fall - avoid the spring rush. Insist on USS Nitrogen Fertilizer, made by United States Steel. Order USS Anhydrous Ammonia, USS Ammonium Nitrate, or USS Ammonium Sulfate from your dealer now.

# YOU'RE MAKING A BIG MISTAKE IF YOU DO NOT TRY 80 PROOF GIN!

If you think higher proof means higher quality that's a mistake.

If you think you have to pay more money to get a better gin - that's a mistake.

If you think the gin the English prefer is more than 80 proof — that's a mistake.

You should know, to begin with, that America is practically the only civilized country in the world that drinks high-proof gin. The British, who perfected gin, know that gin has an ideal taste and flavor balance, and they prefer it at milder, smoother 80 proof. Here's the whole story:

## **80 PROOF GIN TASTES BETTER**

"Proof" is no measure of quality. It's a measure of alcohol content alone. (100 proof means 50% alcohol.) Alcohol itself has no flavor. The pleasant taste of gin comes entirely from the herbs with which

The best test of gin is to drink it straight or on-the-rocks. You'll find 80 proof gin has the big taste advantage of 80 proof mildness - with the same full flavor of higher proof gins.

## **80 PROOF GIN COSTS LESS**

Gins are taxed by the U.S. on their proof or alcohol content, only. The lower the proof - the lower the taxes, and the lower the cost to you. When you buy an imported label, you add the cost of shipping and duties. That pushes the price even higher, without giving you 80 proof quality.

## 80 PROOF GIN MAKES BETTER MARTINIS

It makes them extra dry, as you like them, but not extra strong. Twenty years ago, the 3-to-1 Martini was standard. Today, with the trend to dryer Martinis, they're made 6-, 7-, even 8-to-1. As a result the modern Martini has climbed from a smooth 76.5 proof to an overwhelming 84 proof! Solution? Mix with 80 proof gin. It gives you the same full, dry gin flavor, but it returns the Martini to its original, more moderate proof.

# 80 PROOF GIN MAKES BETTER TALL

When you mix a tall drink, like a collins or a gin 'n tonic, you dilute the strength of the gin "to taste." You also mix for balance of flavor. 80 proof gin will give you better balance. You don't have to drown it to drink it.

# HOW TO MAKE DRY MARTINIS MAKE MORE SENSE

Dry vermouth	Dry Gin	(or Vodka)
3 - to - 1 (Traditional)	76.5 Proof	69.0 Proof
5 - to - 1 (Dry)	81.0 Proof	72.6 Proof
8 - to - 1 (Extra Dry)	84.0 Proof	75.1 Proof
(The "standard" proof for is a moderate 67,5 proof!)		led Martinis
