Work Smarter . . . Not Harder

By BERNICE STRAWN, Extension Home Management Specialist

WINTER CLOTHING AND BEDDING

... will soon be ready for summer storage. To keep them safe from mildew and moths, get paradichlorobenzene. Ordinary feminine tongues may trip over the chemical term, but this product is available under various trade names. You can get it at the grocery or drug store.

Para-dichlorobenzene controls both moths and mildews. Scatter crystals through folds of garments before packing in boxes. Check directions on the package for the amount to use.

Some plastics are damaged by this product. Remove buttons and other ornaments which might be affected.

WORK CLOTHES DON'T COME CLEAN EASILY

... but oily dirt will be easier to get out if washed promptly.

If an outfit is worn only one day before it goes in the washer, you can get it clean. This doesn't need to mean a big expense. Just two or three changes may be enough because many of these don't need ironing.

Remove stains first, then soak 10 to 15 minutes in warm suds.

Wash in hot water with the largest amount of soap or detergent suitable for your washer. For extra dirty clothes, two clean suds cycles may be needed. One-half cup ammonia may be added to the first suds. Try adding a cup of vinegar to the last rinse to brighten the color.

Careful drying eliminates ironing. Take corduroys and denims from the dryer while slightly damp. Shake, shape and hang to finish drying.

IF YOU HAVE HARD OR "RED WATER"

... it is costing you money—maybe as much as \$10 a month. Hard water is rightly named. It's hard on the pocket book, your appliances, the plumbing and everything.

Judging from our telephone calls and those received by county extension offices, there is more red rusty water than might be expected. Sometimes rust comes from plumbing or an old water heater.

If you have this problem, don't use chlorine bleach or you'll only make matters worse. A packaged water conditioner will help prevent yellowness of clothes.

Our extension fact sheet, "Iron in Your Water Supply," will give you help. It is free at your county extension office or write to us at Oregon State university.

IF YOUR VACUUM CLEANER

... doesn't do as good a job as when new, check these points. Maybe the brush is worn. Lay a stiff card across the nozzle. The bristles should extend beyond the card. If they don't, the brush on the canister cleaner should be replaced.

If you have an upright cleaner, adjust the position of the brush roll. Your instruction book will tell you how.

Check the belt, too. If it's stretched or cut, the brush will not rotate. Replace the belt and be sure to get the right size for your cleaner. Your instruction book will show you how to install it.

A full bag hinders dirt pick up. Replace the bag when it is about half full or sooner.
