Control hard-to-kill pests on alfalfa

Cygon 267[®], the versatile insecticide, is now registered for SEED ALFALFA and ALFALFA (grown for hay) aphids, leafhoppers, lygus bugs, grasshoppers and reduction of alfalfa weevil larvae

Cygon offers double effectiveness in control of insect pests:

- as a contact insecticide with high initial kill.
- as a systemic protector within the plant.

This double-barreled effectiveness provides protection from inside and outside the plant, reduces the effect of weather and gives control up to 14 days.

Cygon is powerful, efficient and its long-lasting qualities and low rates make it a truly economical material. When applied according to directions it poses no residue problems. It is among the less toxic organic phosphate pesticides. NO PERMIT REQUIRED.

Cygon 267 is also registered for use on cotton, safflower, beans, various cole crops, peas, peppers, potatoes, tomatoes, watermelons. Also — seed crops: carrots, onions and bermuda grass. It is highly effective against aphids, leafhoppers, lygus bugs, grasshoppers, thrips, and leaf miners.

For further information contact your local agricultural au-

thorities or insecticide supplier. Be sure to ask for SUR-TEN, the superior wetting agent to be added to agricultural sprays. Before using any pesticide, stop and read the label.
