Control Resistant Wireworms in potatoes...

Use Niran® 10-G ...and be sure!

Powerful Niran 10-G controls all wireworms in potatoes... even those which have developed resistance to many conventional insecticides.

Play it safe. Wireworms damage both potato seed pieces and infest growing tubers. Crop damage in infested soils can result in heavy culls. Wireworms can cause substantial losses of marketable production.

The most effective way to use Niran 10-G is to broadcast from 20 to 40 pounds of granules per acre before planting. Immediately work Niran 10-G into the upper 4 to 6 inches of soil. Wireworms move about in the soil. That's why broadcast application is most effective.

Be sure the soil temperature is warm enough before applying Niran 10-G. Wireworms do not move near the surface of the soil until the temperature is warm enough. Soil temperatures are generally too cool prior to April 1. Follow directions carefully for most effective use.

Niran 10-G is a powerful chemical. Treat it with respect. Read and follow directions on the label carefully.
