WORK SMARTER—NOT HARDER

... when painting a wall, says Mrs. Dorothy Brown, extension home furnishings specialist at OSU. If the supply of paint is running low, be sure you can paint all the way to the corner.

Then a slightly different color in the next can of paint will never be noticed, since light strikes walls at different angles and changes the light reflection.

NOTICE OF ANNUAL SCHOOL ELECTION AND MEETING

NOTICE IS HEREBY GIVEN, in compliance with Sec. 331.010, ORS, to the legal voters of School District No. 61 of Malheur County, state of Oregon, that the Annual School Election of said District will be held at the High School, between the hours of 2 p.m. and 8 p.m. on the first Monday of May, being the 2nd day of May, A.D. 1966, for the purpose of electing one director from zone 5 for five-year term and one director from zone 2 for three-year term, due to directors having resigned.

Control Resistant Wireworms in potatoes...

Use
Niran® 10-G
...and be sure!

Powerful Niran 10-G controls all wireworms in potatoes . . . even those which have developed resistance to many conventional insecticides.

Play it safe. Wireworms damage both potato seed pieces and infest growing tubers. Crop damage in infested soils can result in heavy culls. Wireworms can cause substantial losses of marketable production.

The most effective way to use Niran 10-G is to broadcast from 20 to 40 pounds of granules per acre before planting. Immediately work Niran 10-G into the upper 4 to 6 inches of soil. Wireworms move about in the soil. That's why broadcast application is most effective.

Be sure the soil temperature is warm enough before applying Niran 10-G. Wireworms do not move near the surface of the soil until the temperature is warm enough. Soil temperatures are generally too cool prior to April 1. Follow directions carefully for most effective use.

Niran 10-G is a powerful chemical. Treat it with respect. Read and follow directions on the label carefully.
