at first. But a little practice puts you out in front for years to come.

For those laborious jobs you don't like, break down the operation into parts. Question every detail—Is it necessary? Why is it done? Devise a new method to eliminate steps. This way you'll make sure you don't fall in a rut.

HOT WATER WASHING . . . kills more germs than cold. But what about that bright red plaid dress of little Suzie's that you're afraid will fade in hot water—and surely you can't use bleach on it as a disinfectant!

Bacteria-causing colds and ear infections can be spread to others in the family wash. For garments which can't take a chlorine bleach, use a pine oil disinfectant. You'll find these products on the grocery shelf. Be sure to read the label on the bottle to know how much to use and when to add it.
