CONTROL LYGUS & APHIDS ON ALFALFA

Cygon provides powerful protection at low, economical rates

Cygon 267 Systemic Insecticide has proved outstanding in controlling the tough insects on field and vegetable crops. It works two ways to knock out pests:

- as a contact insecticide—with high initial kill
- as a systemic protector within the plant—active 14 days and longer.

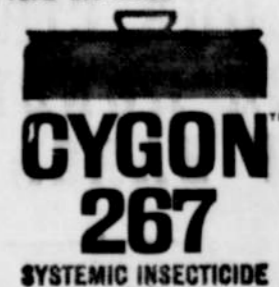

This double-barreled action—provides protection from outside the plant and inside the plant. The insecticide within the plant remains on guard against insects when they attack and is also unaffected by sun or rain.

Cygon's long-lasting qualities and low rates make it a most economical insecticide. It is also a very low-hazard material. No protective equipment is needed. When used according to directions there are no residue problems. NO PERMIT REQUIRED.

Cygon 267 is also registered for use on various cole crops, peas, peppers, potatoes, tomatoes and watermelons. It is highly effective against aphids, thrips, leafhoppers, leaf miners, lygus bugs, grasshoppers.

For further information contact your local insecticide supplier.

Before using any pesticide, stop and read the label.
