Shirley Cleaver, daughter of Mr. and Mrs. Lloyd Cleaver, is visiting in the home of a girl friend at Ellensburg, Wash. She left June 26 and expects to return home next week.

July 4th Safety Quiz
Lists Driver Emergencies

Suppose during your 4th of July trip an oncoming car veers into your lane and hurtles toward you. Which two of the following four actions do you take?

1. Blow the horn. 2. Apply the brakes. 3. Steer as far right as you can. 4. Switch to the lane the other car should be in.

In all but the rarest circumstances, moves 1 and 3 are best. The horn may wake the other driver up, and a right steer is more likely to provide escape than braking or turning into the oncoming traffic lane.

If you're one of 400,000 American teenagers who learned to drive this year with the Aetna Drivotrainer system, you not only knew the answer, you practiced the maneuver in the safety of your classroom simulator car.

But if you haven't tested your safety sagacity lately, maybe you should tune up for holiday driving with these additional questions from Aetna Life & Casualty, developer of the Drivotrainer system:

TRUE - FALSE

1. In case of a blowout, take your foot off the accelerator immediately, then pump the brakes.

FALSE. Ease up on the gas gradually, not abruptly. Wait until the car slows naturally before braking gently.

2. If your car, heavily loaded for a trip, seems easier to steer than usual, your tires need more air.

FALSE. You should move some of the heavier items farther forward.

3. It is sometimes better to steer toward an object in the road instead of trying to miss it.

TRUE. If your choice in an emergency is between hitting a moving vehicle or a minor ob-

struction in the road such as a rock or animal, choose the latter. If the object is small enough, straddle it rather than swerving to avoid it.

4. A light rain is often more dangerous to drivers than a heavy rain.

TRUE. A light shower makes highways slicker than a heavy rain because road oil and grease "float" on the surface of the moisture. A down-pour washes them away.

5. On turnpikes, rear-end collisions are the most frequent type of accident.

FALSE. Most turnpike accidents involve only one car. The statement is true for two-car accidents, however.

6. When an oncoming car fails to dim its lights, you should slow down and watch

the right side of the road. TRUE. If you look directly into the high beams of an oncoming car at night, your eyes won't recover completely from the glare for one full minute. FALSE. About three out of four accidents happen in daylight, on dry roads, in clear weather. Most fatalities occur at night, however.

8. For better control on curves, slow down as you begin the turn and accelerate half way through it.

FALSE. You should slow down well before you begin the curve and gradually accelerate about two-thirds of the way through it.

9. When passing, you should not cut back until you can see the car you passed in your mirror.

TRUE. This is a handy way to gauge a safe distance.

Too many greases?

There's a **STANDARD** answer

RPM Multi-Motive Grease in a handy cartridge gun kit greases everything.

QUESTION:

How does a power company operate in times of inflation like these?

ANSWER:

Very carefully—and must keep expanding at the same time!

CONSTRUCTION COST INDEX

COST OF MONEY—PRIME BANK RATE

Inflation affects everyone, usually in an adverse way. That's why so many efforts to curb it are being made. In the meantime, most costs of doing business—or of running a household—are at record-breaking high levels.

You might think a power company could halt new construction until cost conditions improve, but we simply can't stop building—that is, if we continue to render the service required by our customers.

We know today that we must invest \$130 million

within the next five years—in spite of high construction costs and high interest rates—to provide electric power for area progress, abundantly and on schedule.

Completion of the T. E. Roach Hells Canyon Development last year gave us a breathing spell before the first unit of another new generating complex must go on the line in eastern Idaho within a few years—but we must make multi-million dollar investments every year in other kinds of facilities to serve you well.

IDAHO POWER COMPANY
A TAX-PAYING CITIZEN WHEREVER IT SERVES

for FARM WORK

OF ALL TYPES

CO-OP. TIRES ARE BEST BY TEST!

With NYLON Construction!

CO-OP. Super Power Plus TRACTOR TIRE

You get More Power... Greater Economy... Longer Life with CO-OP Super Power Plus Tractor Tires. Nylon is toughest cord known; resists moisture. Agri-Tred rubber compound provides longer traction life; greater durability.

CO-OP. SUPER ALL PURPOSE TRUCK

A Traction Tire for all purpose use that delivers more mileage, costs less initially and provides better recapping. Off the road, on pavement—in mud, and snow... the Super All Purpose fills every trucking need.

CO-OP. Dual Rib

Wide center groove gives better steering balance and a stable grip to prevent sideslipping. Nylon cords assure longer life; resist moisture. Tough Agri-Tred rubber compound; resists barnyard acids.
