met a friend in the mar-yesterday and, while we re visiting she mentioned that was going to can rhubarb. I'm sure much rhubarb goes seed in our area and isn't as a "friend." There's plenty of fruit in Treasure Valley, but, like everything else, has skyrocketed in price. Have you made Rhubarb Jelly? I like it made with neapple and strawberry ge-ine. The flavors compliment each other.

This quickie from Denver, Colorado sent to me by a friend who gathers recipes like some people collect stamps. I've made this and have it tucked away in our home freezer. Next time I entertain, I'll slice it and serve it with a bit of whipped topping. Slice it thin, it's loaded with calories!

County Herds Disease Free

Cattle producers in Malheur County should be aware that brucellosis vaccination of heifer calves is now recommended to be done at an earlier age according to word received this week from Oregon State University according to George Bain, County Extension Agent.

Official ages for vaccination are now 3 to 6 months of age for dairy heifers and 3 to 10 months for beef heifers, says Bain.

Vaccination at these ages is to prevent a carry-over later in the animals when they may be tested at a later age.

Many producers in the county continue to vaccinate their replacement heifers Bain says to give them protection in case of a brucellosis outbreak.

The county now enjoys a modified, certified brucellosis free status, Bain adds, which means that there is practically no brucellosis known in the county.

The certificate reads that brucellosis exists in less than one percent and is not to exceed five percent of the herds in the county.

Cattlemen in the county are to be complimented on practically eliminating this dread disease from cattle in the county, says Bain.
