THE GRAND SCENERY OF OREGON.

The Scientific American recently sent a man to Oregon to take views and prepare an article descriptive of Oregon. The following is from the current number of that publication:

"By the completion of the North ern Pacific railway, Oregon was provided with the veins and arteries necessary for full activity of life, and the state is now growing and extending and expanding its resources to a remarkable extent. Peculiar difficulties were offered to the construction of a railroad through this country, owing to the extraordinary freaks of nature in this volcanie district. The Snake river, which has cut its course through the vast plain of southeastern Washington, has offered an almost impassable barrier. Its canon has a depth of 4,000 or 5,000 feet, and the cliffs are so precipitous as to baffle the efforts of the most intrepid mountaineer, while the stream itself is not navigable. Nature here was wanton and her work was on a gigantie scale. Nowhere on this continent do we find the marks of her finger more striking than here. Vast barren plains, broad navigable rivers, roaring torrents, rushing through impresable canous, lofty mountains and fertile valleys on the western coast, are some of the characteristics which, from the'r size, appal the visitor.

"East of the Cascade moun ains, Oregon is a sterile plain with no vegetation save the sage brush, the dwarf pine, and the jumper. There are a number of lakes in the southern portion, which, however, are mostly alkaline and marshy. The country is dreary and monotonous. In the region of the Columbia tributaries at the north, however, the country is more attractive, and the valleys are covered with a growth of forest trees. The woods abound in game, and the abundance of hear, deer, panthers, mountain sheep, and wolves make this region a paradise for hunters.

"The western coast is very differ ent in physical characteristics, in climate, in fertility and in every respect from the region described above. It possesses the traces of volcanie action found in the eastern plains, and there are evidences in edly queer and out of the natural the vast tercaces which rise in sue- line.

cessive levels toward the top of the lofty mountains that formerly the southern arm of Paget Sound exdered this district very rich in veg. The men now breatnes more easily, etation. The valleys of the many The tinnate and inbred desire of

gerous to commerce.

Owen's lake, California, is a natural soap mine, and there is a company engaged in mining its depths for pure and unadulterated soap. A grub breeds there, becomes a fly and the dead flies line the shore a foot deep. The water of the lake has a strong solution of borax and sods, and the dead flies furnish the grease ings, Joy's Vegetable Sarsaparilla did all that that blends with the bornx and forms you promised. I had tried so many prescripthe soap. A large force is engaged in digging up soap that has been forming through uncounted ages. If a duck is shot and falls into the take its fat soon becomes pure soap. There is nothing romantic about this natural phenomenon, but it is decid-

A WOMAN'S WAY.

A Startling Business Proposition. When Mrs. Fowler, of 227 Ellis street, stopped in at a leading city druggist's to ask what effect "The California Remedy." Joy's Vegetable Sarsaparilla, would have in cases of dyspessia and sick headaches, she was assured it would relieve both. She was so incredulous that the druggist gave her a bottle, not to be paid for unless it effected a cure.

The following is the convincing conclusion. San Francisco, February 8, 1888. tions that I had come to believe nothing would relieve my dyspepsis and sick headsches, but I have not had a return of either I believe I am permanently cured. You have my permission to make this public, for a remedy that will cure dyspepsia and prevent sick headaches should be generally
