THE CAPITAL JOURNAL.

PUBLISHED DAILY, EXCEPT SUNDAY, BY THE Capital Journal Publishing Company, (Incorporated.) Office, Commercial Street, in P. O. Building entered at the postoffice at Salem, Or., as second-class matter.

HOFER BROTHERS, - - - Editors.

After Election Press Reflections.

Polk County Itemizer: Remember that not one-half the evil things you have heard of others is true, and the fact that a man voted against you is no evidence that he dislikes you.

Albany Herald: The visitors to our state capital can now ride from Salem out to the penitentiary on the motor line propelled by electricity. It beats horse altogether.

Dallas Observer: The Oregonian says that Governor Penneyer may thank Joe Simon and the Union party for his re-election. Of course every fellow must have some means of explaining away what don't suit him; As we look at it, the people simply wanted to retain a man who had been tried in the balances and not found wanting.

Dallas Observer. Mr. Thompson was nominated more on account of his money than any other point. He was accused by the opposition of running a "boodle" campaign; but he didn't "boodle" any and got left. As long as this was charged against him, we believe it would have been better for him had he "boodled" a little and created a little Thompson enthusiasm.

San Francisco Chronicle: In 1888 a disgraced California Democrat who went to Oregon to help Cleveland declared after election that the sheep had voted the republican ticket. It looks, judging from the majority given Binger Hermann, the republican representative, as though the sheep had voted again this year. The simple fact is that Oregon is protectionist and republican, and that not even an off year can induce the people of that state to be deluded by the sophistries of Democracy and free trade.

Independence West Side: Sylvester Penneyer has been elected governor of Oregon. One of the most significant facts about his election is that he was elected in a republican state, which gives Binger Hermann probably 10,000 majority, by from 3000 to 4000 and also being opposed by that mighty paper the Oregonian. Mr. Penneyer is the people's friend, if any one can be, and as such he was elected. If he proves untrue to his professions, his future is not so bright as his present. He will now be a prominent candidate for vice president of the United States.

San Francisco Call: Our democratic friends profess to be pleased with the result in Oregon; that the state is fortunate in being able to please both parties while attending strictly to its own business. The principal question before the American people at the present time is if the McKinley tariff bill shall become a law. Democratic journals and speakers have denounced it in the broadest and most comprehensive terms as imposing an unnecessary tax on the necessities of life. Oregon was called upon for its opinion while the bill was pending between the house and the senate. Oregon declares strongly for the bill. It returns Mr. Hermann, who supported it, by a majority without precedent in the history of the state. In the face of this a democratic contemporary complacently declares that the Oregon election will strengthen the hands of those republicans who have been resisting the McKinley bill. The election of a republican legislature reaffirms the political position of the state in respect to Mr. Hermann. It might be said that Mr. Hermann was returned on the ground of personal efficiency; but the election of sixty republicans to thirty democrats to a legislature that will have the choice of a United States senator does not leave any ground for the assumption that Mr. Hermann's large vote was a personal compliment rather than a political endorsement of his course in congress.

Oregon State Prison.

Two females occupy cell number 1, first floor.

In the shops every one was busy at his own special work.

In the commissary department everything was in good shape and plenty of it. The amount of meat daily used is from 375 to 400 lbs.; flour about two barrels; vegetables from 375 to 400 lbs.

The number of men employed in the shops varies from 200 to 220. Their average income amounts in a year to about \$2,250.

The number of prisoners now confined is 322. There were four discharged this week and at an average of ten per month.

The garden inside of the walls present a very promising aspect. The strawberry bed was simply immense. We can speak for ourselves. We heartily agree that the management is all that could be desired.

SALEM ELECTRIC CARS.

Running More than Two Miles Through the Capital City, - Power Enough for Seven Cars.

A COMPLETE SUCCESS.

The Capital City Street Railway Co., was organized last September, with the specified object of bringing into close proximity East Salem and the business part of the city. The company being wide awake to the future importance of the capital city, left nothing undone for equipping and operating one of the best street car lines in the west. Their energies and labors were not in vain, for now Salem has a first class electric line, two and one-fourth miles in length, running from State street down Liberty street to Chemekeka thence up Chemekeka to 18th street, thence back to State, thence up State to the state penitentiary, making over two miles of as fine a roadbed as can be found in any city. The company have chosen the Sprague system, with neatly finished Pullman spring cars, well lighted by five electric lights to the car, of sixteen candle power each. The company are now running two cars, each with a seating capacity for twenty persons with standing room for as many more.

THE COMPANY'S BUILDINGS.

The power house is situated on State street at the crossing of Mill creek. The power house proper is 39 by 60 feet, 14 feet high; with an engine room 24 by 36 feet and boiler room 12 by 36 feet and a neat office 10 by 22 feet. The car house is 25 by 60 feet, 20 feet high with room for six cars, and in case if needed can be arranged to hold eight. The building is of the best Oregon fir, on a brick foundation and is substantially built. The engine is of Heek's patent of 1887 and made by the Taylor manufacturing co. of Chambersburg, Pa., and is an eighty horse power engine connected to a Taylor boiler of a hundred horse power. The building is lighted by ten 16 candle power electric lights. The company has a good water power house, which can be turned into practical use without much additional expense. The construction of this line has cost the company about \$40,000, but will soon return dividends to the stockholders, and will be one of the best advertisements that the city could have invented. A new era of progress has reached the capital of Oregon, and every citizen should take a pride in such enterprises to aid in developing the natural resources of the great Willamette valley, and every pulse of advancement will beat with a new vigor in the spirit of progress which is soon to pervade every branch of industry.

The engineers can tell at the power house, by the "Regulator," the amount of force there is on the wire, and the "Ampers" shows the amount used by all the cars on the line, and this is regulated by the machinery itself.

WHAT MAKES THE CARS GO?

The most important feature to the casual observer is, what makes the cars go. There is a large 12 inch dynamo revolving at the rate of 1200 revolutions per minute; in contact with this are two powerful electro magnets, of opposite poles. The electricity is conveyed from these by electric brushes to two wires, one connected with the track and the other to the wire overhead, from whence it is conducted by the trolley on the top of the car to the motor under the car, which is a dynamo similar to the one in the power house, giving to it a rapid rotary motion thence through the wheels to the rails and track to the dynamo in the power house. The tracks are connected at every little distance by cross wires which keep them charged as a single current, and a rail may be removed from either side without interfering with the traffic of the road.

The dynamo is conducted by introducing resistance in the magnetic field, and is controlled by an ingenious switch of regulator, in the dynamo room. The machine is protected from abnormal currents or lightning, by fusible strips, which melt and break the circuit, at a certain degree of heat, which will be caused by too heavy a current on the wire. The pressure, or amount of electricity on wire (or the voltage), is maintained constantly at 500, which is not dangerous to life. The dynamo in power house is automatic, and the operation is as successful, or more so, in wet weather as in dry.

The direction of the car is managed by a switch on the platform, and is completely under the control of the driver, and can be run at different rates of speed, forward or backward at will without reversing trolley or leaving the end of the car. The lights are also connected to the same circuit and can be turned on or off by a small switch in the car. While the track is charged with electricity at all times when the dynamo is running, it is harmless to stock and persons who may be on the track. The same dynamo can run incandescent lights or stationary motors for power on same circuit, making connections at any point on the line; can run lamps from 10 to 100 candle power, and motors from 15 to 25 horse-power.

AT THE ASYLUM.

A Journal Reporter Takes a Run Through the Institution.

On June 5th, 295 Albany excursionists, with some Salem and escorts, visited the asylum and grounds. Of course they didn't get to see all of the 620 patients, but they got to see the better class as well as the worst. All seemed well pleased with the way things were conducted.

A reporter of the JOURNAL was out to the asylum, and had his attention called to some of the improvements which have taken place within the last three years. A large boiler house, engine room and engineer work shop has been added. The boiler house contains a large 100 horse-power boiler, which supplies the steam necessary for the various departments of this building requiring the same. In this engine room is over 15 horse-power engine which supplies the power for running the machinery in the laundry, also for sawing the wood. Here we also find the large and powerful force pump which is kept running from 5.30 a. m. to 6.30 p. m., pumping pure cold water to every part of the house from a well 55 feet in depth and 8 feet in diameter, yielding 6000 gallons per hour. Everything in this department presents a neat and orderly appearance.

Engineer McCarl has just finished putting in a fire system second to none in any public institution. The hydrants are so located that every part of the building can be easily reached. One of the grand features of this fire system is the water supply, which is received from a large cistern, 80 feet long, 40 feet wide, and 14 feet deep. This cistern is used for a double purpose, not only as a fire cistern but also a swimming bath for the patients. And to prevent any accident from happening there in a false floor which can be raised to the surface instantly. The fire system was designed by J. A. McCarl, engineer, about two years ago and approved by the board and the money appropriated by the last legislature. He has also designed an electric alarm system which gives the alarm from any part of the building, which shows the exact location of the fire. Among other improvements is a window guard, invented by J. A. McCarl, which has proved a success, and the new wing will be fitted with the same.

In the kitchen we noticed that most all the cooking was done by steam which insures good cooking without the possibility of scorching or burning. We noticed that the soup cooked by steam was more nutritious and better than that cooked by fire. These steamers were built by the engineer and his assistant. One thing we noticed was the cleanly aspect of the kitchen and surroundings.

We also noticed that Dr. Harry Lane was looking out for the future welfare of the patients by the number of attendants and patients at work in the kitchen putting up strawberries of which they have an immense supply—Dr. Lane has purchased a vast number of glass jars and what berries cannot be used at present are being put up for future use.

Another improvement which we particularly noticed was the taking away of the high fence that used to surround the building, and gave the place a prison like aspect. It being gone, gives the place a more cheerful and homelike. An other improvement which we will mention and of which the state may well be proud, is the hot water heating system which heats the whole institution.

This heating system was put in by Gardner & Co of Portland, under the supervision of engineer J. H. McCarl. This heating system insures a mild, constant heat and does away with the danger from fire. Other improvements which are noticeable but have not the space to mention are a credit to the management of the asylum. There are at present twelve men from the asylum up on the Santiam river assisting in repairing and working on the Santiam ditch whom they expect to be gone ten days.

PRACTICAL TESTS.

An Astonishing Offer—Some of the Replies.

The San Francisco papers of recent date contained the following offer:—"As an evidence of the ability of Joy's Vegetable Sarsaparilla to prevent sick headaches, we will give to the first twelve responsible persons who will apply at our office a bottle free if they will agree that after they have been cured that they will admit the fact over their signatures."

This offer so startlingly asserted the efficiency of the remedy that nearly all of whom responded, are probably the most convincing attestations that any remedy ever received. The following is a sample of those received:

I have been subject to bilious headaches and constipation for several years past; in fact, have been compelled to take a physic every other night or else I would have a headache and dull, mean feeling. I have taken that bottle of Joy's Vegetable Sarsaparilla, and have derived great benefit from it, and intend continuing it. After my own experience I can heartily advise those troubled with biliousness and constipation to try it. Yours, CHAS. E. ELKINGTON, 125 Locust Avenue, San Francisco.

To Home Seekers.

The Capital City railway company is prepared to tell home-seekers something to their advantage. Mr. David Simpson has taken charge of their real estate department at 115 State street. Call and see him.

Dyspepsia

Makes many people miserable, and often leads to self-destruction. Distress after eating, sour stomach, sick headache, burning, loss of appetite, a tart, "raw" tongue, bad taste, coated tongue, and irregularity of the bowels, are the more common symptoms.

Distress After Eating. I have been troubled with dyspepsia, I had but little appetite, and what I did eat distressed me, or else I would experience faintness, or tired, all-gone feeling, as though I had not eaten anything. My trouble, I think, was aggravated by my business, painting, and from being more or less shut up in a room with a sour fresh paint. Last spring I took Hood's Sarsaparilla. It did me an immense amount of good. It gave me an appetite, and my food relished and satisfied the craving I had previously experienced." BROOKS A. PAGE, Watertown, Mass.

N. B. - If you decide to take Hood's Sarsaparilla do not be induced to buy any other.

Hood's Sarsaparilla

100 Doses One Dollar

Insure in Your Home Company!

"The State,"

Which has for the past six years PAID MORE TAXES. Issued More Policies. Received More Premiums. And Paid More Losses.

Upon property located in Oregon or Washington than any other company.

It was the First Company to Pay all Losses in Full and in Cash.
