"August Flower"

For two years I suffered terribly with stomach trouble, and was for all that time under treatment by a physician. He finally, after trying everything, said stomach was about worn out, and that I would have to cease eating solid food for a time at least. I was so weak that I could not work. Finally on the recommendation of a friend who had used your preparations

A worn-out with beneficial re-Stomach.

sults, I procured a bottle of August Flower, and commenced using it. It seemed to do me good at once. I gained in strength and flesh rapidly; my appetite became good, and I suffered no bad effects from what I ate. I feel now like a new man, and consider that August Flower has entirely cured me of Dyspepsia in its

worst form. JAMES E. DEDERICK, Saugerties, New York. W. B. Utsey, St. George's, S. C., writes: I have used your August Flower for Dyspepsia and find it an excellent remedy.

A New Hampshire lawyer, with evident appreciation of his little stepdanghter's wit, tells two stories about her.

Shortly before his marriage with her mother the four-year-old said one day. when the approaching wedding was being discussed: "I'll be glad when Mr. G- comes

here to live." Her mother was pleased.

"Why will you be glad?" she asked. "'Cause p'r'aps then we'll go away ometimes. After the wedding the stepfather at-

tempted to correct the child for misbehavior at the table. She robelled and said, with flashing eyes: "This isn't your house anyways."

"No," he said gently, "it is our house."
"No, it is not," she replied, "it's just your stephouse."—Youth's Companion.

-Smith & Gray's Monthly. Named Him

It was in the Sabbath school class, and little 'Liz'beth had been listening with much interest to the scriptural illustra- Maggie the chambermaid, strait laced tion of the shepherd and his sheep. "Now," said the teacher, "tell me who takes care of the sheep?"

"The shepherd," answered the class in "That is right; and who else?"

There was silence for a moment. Then a little hand was raised with "I know, teacher." "You may tell."

And 'Liz'beth answered, with sincere emphasis, "Bo Peep,"-Washington Star. eyes. If you marry a white livered

RABBIT SKINS FOR MARKET.

Long Eared Petts Imported from Austraffa and New Zealand.

"Here is a set of sables fit for a princess," said the dealer; "fifteen dollars seems cheap for them, does it not? That is because they are really made of rabbit skins from Australia. The fact is that there is hardly any for in the market at present that is not imitated closely by the skillful preparation of these same long eared pelts. New Zealand also exports them to the number of 10,000,000 yearly. Their production is one of the most important and profitable industries of that colony 'Most of them are shipped to Euro

pean cities, where they go through the necessary processes of manufacture be fore being disposed of to the retail mer chants. The art of coloring rabbit hair has attained such a high degree of per lection that it can be made to counter leit seal, otter, ermine or almost any other sort of fashionable fur. The skins are largely made into felt hats. which are very beautiful and soft to the touch. When the fur is long it is sometimes ent in two and the finer or mner portions are mixed with wool Various machines have been invented for constructing hats of rabbit pelts some of which distribute the hair with marvelous rapidity and evenness on revolving metal cones.

"The rabbits are skinned immediately upon being killed, the heads, feet and all the fat being removed. If the weather is fine the pelts are dried in the open air, but in bad weather they are hung up under sheds. When thoroughly dried they are turned outside in to proteet the fur from injury, and then they are tied in bundles of a dozen to twenty each and packed in bules, each of which contains from 3,000 to 3,500 skins. A little carbolic acid powder is used in the packing to preserve them from attack by insects. In this crude state they are worth from flfty to eighty cents a dozen, according to quality

"The history of the rabbit's introduc tion into Australia and New Zealand affords an illustration of the damage man may do by interfering with the distribution of animals which nature has chosen to make in the world. When Captain Cook, the celebrated navigator, first visited those countries he found a famus entirely different from that of any other part of the world. In Australia gigantic marsuplals, like the kangaroo, were chiefly conspicuous, while in New Zealand the only land mammals were two varieties of the rat and one of the common bat,

"Since then 'acclimatization societies' have done their best to introduce there all sorts of creatures on four legs and two legs that could be brought from elsewhere. In many instances these efforts resulted most unfortunately. Several years ago some dozen pairs of common gray rabbits were imported for the purpose of supplying sportsmen with an object for the chase. The occasion of this interesting experiment was made one of rejoicing, and the beasts were let loose with speeches and banquets to welcome them. They multiplied so fast that the people did not have to wait long for all the sport of that kind they could desire.

"In fact, they soon overrun country in such numbers that it became a question whether they or the colonists should occupy the land. Great areas were entirely denuded of vege tation by them, so that the sheep died by millions and the raising of crops became almost an impossibility."-Washington Star.

Two Broken Hearts.

As she was to be married on the 15th, in her filly white gown and apron, quitted on the first of the month. A week after she came back:

"It broke my heart, madam, but broke the engagement. I discovered that he had a white liver.'

"And what is a white liver, Maggie? And how did you make this awful discovery ?"

"I discovered it by the stare in his man you die within a year. I returned the engagement ring to him, and the At the Hearing: The Officer-Your watch marked with my monogram, and honor, I found this man wandering the the scarfpin. He said, I will go to streets at 3 o'clock this morning. He fifty physicians with you, Maggie, and prove that I haven't the white liver.

> And the tears scintillated on Maggie's pale cheeks as the dew in the sun on the petals of white roses. - New York Times.

American Geography.

The confusion which foreigners make of our geography is well illustrated by a German poem which appeared sev eral years ago. The poet, with utter unconcern about locations and distances, makes such amusing blunders that its literary value is entirely lost. The argument is something as follows:

Under a palm tree on the shore of Lake Erie the hero is devoured by an "Come up and see my pictures," said Mr. Newrich to his friend. "I've got a fate, rushes from her home in the everglades of Florida on the banks of Lake Superior, captures the alligator, extracts the hero's body and buries it with magnificent pomp in Greenwood, in the city of New York, in the state of St. Louis. - Youth's Companion.

> Deep Sea Creatures. There must be myriads of fish living in the depths of the sea whose form and characteristics we can never even guess at, for, should specimens be succonfully hooked, they would burst

The Disposal of Refuse in Cities. The disposal of the refuse in cities, while it has been a problem in the sanitation of our larger towns, is yet to be solved. There is probably not a city of any size in the United States where the disposal of wastes is satisfactory or conducted in such a manner as to meet the demands of cleanliness and 1 giene. If there is a perfect plan adopted there are to be found defects in its execution which render ineffective the methods used. The report of Mr. Walter V. Haft, general sanitary officer of the Chicago board of health, gives a summary of different cities as to their methods of "collection and disposal of garbage and refuse."

From this we learn that in New York the garbage is collected by the city teams, loaded upon flatboats, removed to sea and dumped. The gar bage is removed from Philadelphia by small contractors in a very unsatisfac tory manner; some feed to hogs, others sell to farmers, and at times it is buried or accumulated on the ground, awaiting slow decomposition. Cremation is recommended. In Brooklyn refuse is removed to the sea. Collections are made daily from hotels, from dwellings twice a week in winter and three times a week in summer. St. Louis collects its garbage and discharges it at certain dumps. It is not satisfactory, and cremation is also here recommended.-Sanitary News.

One Plant Family.

Three American food plants, the in dian corn, the potato and tomato. have revolutionized the food problem of the civilized world. Yet another American plant, though not a food producer, might be added to this list of New World conquerors, for it has had history even more remarkable than that of the others; the "Virginia weed" has penetrated far beyond the bounds of civilization, and made conquests where the names of the other three plants have scarcely been heard.

The tomato comes of a family which is largely in the service of mankind. It gave us first of all the potato. The eggplant and the cayenne or red pepper plant-two other food producers-be long to it; the pretty race of petunias also and the Jerusalem cherry; the climbing bitter sweet and that inhabitant of oid fashioned gardens, the matrimony bush; the famous tobacco plant and the herb belladons, of great medielnal importance. Our wayside weed, the common nightshade, whose bright berries we like to see in autumn, is also a humble member of this family.-Boston Transcript.

An Automatic Signal.

A novel device, one which seems to be regarded as a step at least in rendering railroad travel safer than it is at present, consists of an apparatus for automatically signaling a train at any given station on the line by the train dispatcher at the directing point, which may be hundreds of miles away from the station at which it is desired to display the signal. The latter, however, is not intended to take the place of an operator; it is rather in the nature of an emergency signal and a check upon the operator who may be engaged in other duties away from his instrument at the all important moment.

But not only this, the apparatus automatically returns a response to the dispatcher, indicating that the signal has been set, and at the same time a bell is sounded to attract the attention of the operator, who is in this way notified that his immediate attention at the wire is demanded. This mechanism is flexible in its application, and there are many other important uses to which it can be put. - New York Sun.

Lives Spent on the Water.

In Japan thousands are born and die on boats without ever living on shore. One of the most interesting features of Japanese life is the manner of living in boats and junks, thousands of which frequent every bay along the coast. The awkward junks always belong to the members of one family, and usually every member of the family, old and young, lives on board. The smaller sailboats are very narrow, and the sail (they never have but one) is placed very near the steru, and extends from the mast about the same distance in either direction.

In these boats men and women are born and die without ever having an abiding place on shore. They wear but few clothes, except when it rains, when they put on layers of fringy straw mats, which give them the appearance of being thatched. At night if in harbor they bend poles over the boat from side to side, in the shape of a bow, cover them with this straw, and go to sleep altogether like a lot of pigs.-London Tit-Bits.

He Was Looking Forward to Dinner Time, When Colonel Elliott F. Shepard laid the corner stone of the new building for his newspaper he gave to the newsboys two tickets entitling them to two meals in a Park row "beef and bean" establishment. Each ticket entitled each boy to all he wanted at one

There is a little gamin who sells the papers on Wall street whose activity has made him known to the men on 'change. That afternoon it was noticed that the little fellow was looking heavy and tired. A gentleman who knew him, and who also knew of the present to the newsboys, asked him if he had lunched on one of the good man's tickets

"You bet I did!" was the answer. I into pieces before they could be ate sixty cents, but"-and he looked brought to the surface, being relieved of the extraordinary pressure under determined-"I'll eat a dollar for dinwhich they exist. - New York Recorder. | Der." - New York Times.

ing from box to box, taking up their contents His key was attached to a small but strong chain, which was fistened about his waist in such a way that it could be taken off only by having the key end of the chain It is customary for the earriers to put the key in a breast pockof after opening a box, the box being fastened again with a spring lock. In the present case the key happened not to enter the man's pocket, but slid d awn inside the box unobserved. He slammed up the loosely closing door, put on the padlock, snapped it and darted onward.

He took two steps, and was brought He took two steps, and was brought up with a suddeness that jarred both the man and the post. The key was inside the box and the carrier was a prisoner. To remove the chain from his body was out of the question. He stood still, therefore, until a young man happened along. To him he explained his predicament, and in half an hour or so a duplicate key was brought from the postoffice and he was released. -New Haven Register.

thousand dollars to him!" That is what one of the chief men of the nation lately said about a boy. "It wooldn't be worth so much to one who meant to be a farmer or who had no opportunities, but to a young college student with ambitions it is worth at least a hundred thousand."

The boy was a distant relative of the man, and had been brought up by careful parents in a far off city. Among other things he had been taught to be friendly and to think of other persons before himself. The boy was on a visit in the town where the man lived. They met on the street, and the younger, recognizing the elder, promptly went to his side and spoke to him in his cordial, happy, yet respectful way. Of course the man was pleased, and knew that anybody would have been pleased. The sentence above was the outcome of it.

A little later the boy came into the room, just as the man was struggling into his overcoat. The boy hurried to him, pulled it up at the collar and drew down the wrinkled coat beneath. He would have done it for any man, the haughtiest or the poorest .-Congregationalist.

An Enormous Man Monkey. It is certain that the orang-outang attains an enormous size, fully equaling the much debated African gorilla. Those specimens which have reached Europe alive are mere pygmies, I have seen skins in the possession of

natives (Bataks) whose original owners must have been something terrible to behold. One, indeed, could not have been less than six feet high and two across the shoulders, though the arms and legs had not been preserved. The hair on this skin was eighteen inches long. I also saw at a Batak house a skull

of a mowas, evidently a very old specimen, whose teeth and jaws were no whit inferior in strength to those of a tiger. I tried to buy the skull, but the of a mowas, evidently a very old specitiger. I tried to buy the skull, but the owner would not part with it, and told a long story as to how it came in his mineral surveyor. City surveyors office, cottle-Parkhurst Block, Salem, Oregon. teeth and his defective Malay he was almost unintelligible, but I made out that it had been slain by his father or grandfather after a desperate encounter; and, indeed, the deep cuts in the bone must have been done by a strong arm and a heavy weapon.—Chamber's arm and a heavy weapon.—Chamber's discovery five us a trul. arm and a heavy weapon.—Chamber's Journal.

She Broke the Spell-and the Hat. "No, I'm not superstitious," said a citizen in conversation, "but my wife is. She went out yesterday and forgot her parasol, so she came back and laid down her pocketbook to get her parasol, then went out and forgot her pocketbook; so back she came the second time and sat down.

"'Aren't you going out?' I asked. " 'Yes, but if I went out the second time without sitting down to break the spell I would have bad luck."

Study of Sea Birds.

In the vast range of subjects the United States fish commission has to study that of sea birds is not to be overlooked. Purely scientific considerations are secondary to utilitarian ones, because it often happens that the only bait obtainable by fishermen are birds, gulls and terns. Without the gannet mackerelers could not tell where the fish were, and the little sea goose, phalaropus, always is a good sign of the presence of mackerel. - New York
