

"German Syrup"

A Cough For children a medicine should be absolutely reliable. A mother must be able to pin her faith to it as to her Bible. It must contain nothing violent, uncertain, or dangerous. It must be standard in material and manufacture. It must be plain and simple to administer; easy and pleasant to take. The child must like it. It must be prompt in action, giving immediate relief, as children's troubles come quick, grow fast, and end fatally or otherwise in a very short time. It must not only relieve quick, but bring them around quick, as children chafe and fret and spoil their constitutions under long confinement. It must do its work in moderate doses. A large quantity of medicine in a child is not desirable. It must not interfere with the child's spirits, appetite or general health. These things suit old as well as young folks, and make Rosche's German Syrup the favorite family medicine.

Getting the Better of Excitement.
A certain Red John, who was a practiced hand at making illicit whiskey in the Highlands, heard that the excitement men in his neighborhood were to pay him a visit. He went in his extremity to a friend of his, a tailor, and promised him a ball of malt if he would allow himself to be stretched on a table as a corpse. This was done. The tailor was decently vested in white sheets, a plate of salt was placed on his breast, and the godly old women of the neighborhood sang their carols around the bier.

As the excitement men were entering a voice was heard from the tailor: "Unless I get two balls I'll cry out." The two balls were promised, and Red John confronted his foe with a sorrowful countenance and an open Bible in his hand. "You have come," he said, "to a house of woe. This is my only brother, who has just died." The officers apologized and retreated. Some time after they learned that Red John never had a brother, but the information came too late. (Good Words.)

Few are Free

FROM Scrofula, which, being hereditary, is the latest cause of Consumption, Catarrh, Loss of Sight, Eruptions, and numerous other maladies. To effect a cure, purify the blood with Ayer's Sarsaparilla. Begin early, and persist till every trace of the poison is eradicated.

"I can heartily recommend Ayer's Sarsaparilla for all those who are afflicted with scrofula, humors, or any of the numerous ailments which it cures. I have suffered for years, and tried various remedies without effect. Finally, Ayer's Sarsaparilla gave relief and put me in my present good health condition."—E. M. Howard, Newport, N. H.

"My daughter was greatly troubled with scrofula, and, at one time, it was feared she would lose her sight. Ayer's Sarsaparilla has completely restored her health, and her eyes are as well and strong as ever, with not a trace of scrofula in her system."—Geo. King, Millington, Conn.

Ayer's Sarsaparilla,
PREPARED BY
Dr. J. C. Ayer & Co., Lowell, Mass.
Price \$1, six bottles, \$5. Worth \$2 a bottle.

STARTLING FACTS!
The American people are rapidly becoming a race of nervous wrecks, and the following are some of the best reasons why. Dr. Ayer's Sarsaparilla is the only medicine that cures the blood, and it is the only medicine that cures the blood.

Dr. Ayer's Sarsaparilla,
PREPARED BY
Dr. J. C. Ayer & Co., Lowell, Mass.
Price \$1, six bottles, \$5. Worth \$2 a bottle.

NERVE & LIVER PILLS
A new principle—Regulate the liver, stomach and bowels. Dr. Ayer's Nerve and Liver Pills are the only medicine that cures the blood, and it is the only medicine that cures the blood.

GINSENG.
THE POWER OF MAN
The Chinese prize the Ginseng root, and it is the only medicine that cures the blood, and it is the only medicine that cures the blood.

SAN FRANCISCO, - CALIF.

HUMOR

IT WENT WITH THE POSE.

The Model's Smile Was Misunderstood by the Suber Girl Student.
An Indianapolis artist who has won prestige in eastern art circles tells the following incident which occurred in a New York studio of much celebrity: A large class of women and girls were sketching from a model, a young Italian, who was posed with his head thrown back, his arms fantastically wreathed over his head and his legs extended in some sort of wild Bacchian caper.

The Indianapolis woman was sketching the model's shoulder when she observed that he was smiling at her in a very familiar manner. Somewhat disconcerted to discover that she had apparently made a conquest of this guileless child of Italy, she began to sketch his knee, as more remote from the artillery of his sentimental glances. In a remote corner of the room giggling arose, and she perceived that the smiles of the flirtations model were taking effect upon some lively girls among the students. They subsided shortly, but the young Italian still continued firing off smiling glances in every direction.

At about the center of the class was a German girl, serious to the core, absorbed in her work, and fierce in her manner as a female Bismarck. Every stroke she planted on her easel was decisive and almost combative. Suddenly she came under the battery of the Italian's smiles, and without an instant's hesitation her voice rang out like a clarion:

"You scotch that smiling; we don't want you to smile!"
The figure of the model relaxed instantaneously and he stood straight as an arrow before the class, the impromptu of offended and wrathful dignity. After an appalling silence he remarked in the severest tones:

"Ladies, I am here before you simply as a model of a 'Dancing Fawn'; so smile goes with the pose."—Indianapolis Journal.

He Qualified Promptly.
When a man is in deadly earnest about securing employment he will not let such a small obstacle as the lack of a wife stand in the way; at least such is the fact in regard to a certain section foreman on the Columbia and Puget Sound road. He applied for the position to Assistant Superintendent McCabe, and his answers to that gentleman's queries were all satisfactory until the question came:

"Are you married? We want a married man to take the position, so that his wife can take care of the section house."

The man acknowledged that he still wandered in the wilderness of celibacy, and Mr. McCabe said in a peculiar way, "Well, you can have the job if you get married in time. Hurry up and I'll give you passes for the 530 train."

It was then half past 4, and it seemed pretty short notice, but some men can get through a great deal of business in a hurry. Before the time had arrived for the train to leave the applicant returned accompanied by a blushing bride and said:

"Well, I've got a wife. Will you give me those passes?"

Filled with admiration at the man's readiness of resource, Mr. McCabe gave him the passes and the happy couple left on their honeymoon. (Seattle Post-Intelligencer.)

An Infallible Remedy.
Alexander H. H. Stuart, who lately died at Stanton, Va., when secretary of the Interior under President Fillmore used to tell the following good story of how he got rid of an office seeker soon after assuming the office: "I was very much annoyed by a persistent applicant for the post of messenger. The man came in regularly every day for several weeks until he became an unbearable bore. Finally one day after the man had gone out, I asked the messenger then in office if he knew what that man was after. He said, 'No, sir.' 'Well,' said I, 'he wants your place, and if I ever see him again he shall have it. I never saw the man again.'—Washington Post.

An Infallible Remedy.
The project of making Brussels a real seaport is making progress. According to the official statements made in the provincial council of Brussels, the cost of widening the canal connecting Brussels with the sea will be 20,000,000 francs; that of the harbor works to be executed at Brussels, 12,000,000 francs; that of a dry dock, 1,000,000 francs, and finally the vaulting over of the river Senette, 2,000,000 francs. The question now is how this expenditure is to be apportioned between the state and the townships interested in the schemes.—Paris Letter.

Wood Cakes.
A German physician, Dr. Krug, claims that he has discovered how to make an edible and nutritious cake with wood. His method consists in transforming the cellulose into grape sugar, a substance suitable for the animal organism. The biscuit is made by adding to this about 40 per cent. of meal of wheat, or rye. Phosphates and all the bone elements may also be introduced. This bread of wood glucose is intended to be fed to cattle, for which it will take the place of oil cakes and other feeds composed of industrial wastes.—Philadelphia Ledger.

Prehistoric Hatchets.
A specimen of prehistoric hatchets of peculiar form was exhibited by M. Villanova, of Ploia, at the meeting of the French association. About 300 of them had been found at Elicho. They were simple emblems or images of a hatchet, made of a thin blade of metal, ornamented on both sides from one end to the other and without edge. At the top is a kind of cup suggesting a socket that does not exist, and representing probably the jet of the casting.

A Lucky Escape.
Fortunate is the man or woman residing in a malaria-infested locality who escapes the pestilence and danger. Not one in a thousand does. When the epidemic is a periodical and wide-spread calamity, it is just as common to see whole communities suffering from it as single individuals. The most vigorous constitution is not proof against it—how much less a scrawny, feeble, or decrepit one. As a means of protection against malaria, the supreme medical agent it will protect any form of human life. It is the only medicine that cures the blood, and it is the only medicine that cures the blood.

A Wonderful Mathematician.
No little sensation has been created at the Academy of Sciences by the performance of a mental arithmetic, who, in the presence of the assembled members, has made the most elaborate calculations in an incredibly short space of time. The name of this phenomenon is Inaudi. He is of Piedmontese origin, but was naturalized a Frenchman some years ago.

Inaudi, who is now twenty-four, is a small man with a head wonderfully developed, and it is a noteworthy fact that he was taken by Broca to the Anthropological society in 1880, being regarded by the eminent savant as a remarkable boy. He succeeded over and over again in getting through two very complicated calculations at the same time in about half a minute, and the extraordinary rapidity with which he solved various problems evoked repeated applause from the academicians. In the great majority of cases his answer followed almost immediately upon the question put to him, but when he was confronted with an exceptionally difficult task he asked to be allowed to reflect a moment. In a few seconds he exclaimed, "I am proving it," and then he added, "Gentlemen, here is the result, and it is quite right." Inaudi never made a mistake.

The Academy of Sciences then and there appointed a committee which will place itself in direct communication with the mental arithmetic, with a view to ascertaining whether his wonderful talents cannot be brought to profitable account. It is thought that his extraordinary gifts may be utilized in astronomical calculations. The committee is composed not only of geometers and astronomers, but also of physiologists.—Paris Cor. London Telegraph.

Grappling with a Burglar.
The villa of the veteran sculptor Thomas H. Ball, in Florence, was entered Jan. 13, and though the burglar was discovered and severely wounded in the struggle that followed, he succeeded in escaping with Mr. Ball's gold watch and 5,000 francs in bank notes. It appears that Mr. Ball's wife, an amateur in returning to the villa at a late hour, found that the contents of a large cabinet standing in the lower hall had been scattered over the floor. Hastening to Mr. Ball's bedroom, he was there confronted by the intruder, who blew out the candle he was carrying, and at once grappled with Mr. Ball. In the struggle, though Mr. Ball's left arm and hand were badly lacerated when he was forced through a glass door, yet he succeeded in pitching the fellow headlong to the floor below, but was too weak from loss of blood to follow him, and the robber got away before assistance came.

Mr. Cocker was unarmed except with a small pocketknife, which he evidently used to some purpose, as attested by the stained walls and staircase. It is not believed Mr. Cocker's wounds will prove serious.

Mr. Ball received no injury except to his nose, but the opportune arrival of his son-in-law doubtless prevented a more serious crime. Evidently the burglar was fully acquainted with the arrangement of the house and the habits of its inmates, and probably the police have been able by this time to arrest the suspected party.—Boston Transcript.

The Most Powerful Locomotive.
The engine Great Britain, which had the honor of conveying her majesty from Carlisle to Wolverhampton, on route from Scotland to Windsor, last November, is perhaps the most powerful engine that has ever been built. Although heavier than any other that has been made at Crewe, it is so constructed that there is no more than the usual weight on any one pair of wheels, and there is therefore no extra strain on the permanent way or bridges. This is brought about by the two pairs of driving wheels being placed in front of the firebox, and an additional pair of small wheels behind the firebox and under the footplate, having half an inch of side play. The wheels under the front or leading end are fitted with Webb's patent radial axle box, so that, although of great length, the engine can travel over curves with complete safety.—English Illustrated Magazine.

THE BOY WANTED TO TALK.

But the Father Was Very Sleepy and Lost Part of the Conversation.
"Good night, papa," said the boy, going into his room.
"Good night," said the boy's father as he turned out the gas and got into bed.

"Are you tired, papa?" asked the boy sympathetically.
"Tired enough to go to sleep, anyway," said the father.
"That's good," said the boy. "It's a great thing to be so you can go to sleep as quick as you get to bed, isn't it?"

"Great, indeed," answered the father drowsily.
"What makes us go to sleep?"
"Why, because we are tired, I suppose," a little impatiently. Then, with a thought of the sympathy, "Sleep is necessary after the work of the day."

"Does a cow sleep?"
"Certainly."
"What makes women more afraid of cows than men?"

"Very likely because they are more timid. Women can't protect themselves as well as men."
"Girls are just the same. They run and yell at every little thing. I'm glad I am not a girl, aren't you?"

"Yes, I'm glad you are not a girl." "No, I mean aren't you glad you are not one?"
"Yes."
"If you were a girl, you'd be my mother, wouldn't you?"

"I suppose I would."
"Well, I'm glad you are not, for then you couldn't show me how to make a kite."
"Do you want a kite?"

"Yes, but tomorrow will do just as well. Who made the first kites, papa?"
"The Chinese, I fancy."
"The men in China fly kites, don't they?"

There was no answer.
"Don't they, papa?"
"Don't—er, what was it?"
"Don't the men in China fly kites?"

"Yes."
"Are there any laundries in China, papa?"
"I don't know. I guess not."
"Well, how do the Chinamen learn how to wash?"

"I'm sure I don't know."
"The Chinaman down at the laundry has got a fiddle. He can't play very well. Did you ever try to learn to play on a fiddle?"

"No."
"I don't want to learn. I'd rather learn to play a banjo. Did the negroes play on a banjo first?"
"Yes, desperately."
"Who taught them how to make it?"

"I don't know. I guess it came naturally."
"What makes them black?"
"What, the banjos?"
"No, of course not, the negroes."
"The coloring matter in their skin is different from ours."

"Do they ever tan men's skin?"
"Boys' skin is sometimes tanned," with deep meaning.
"Oh, I don't mean that kind of tanning. That's strap oil, isn't it?"

"I guess so."
"What's hair oil made of?"
"Bear's grease, I've read."
"If I could kill a bear when I go up into the Adirondacks on my vacation I could get a lot of hair oil, couldn't I?"

"I suppose so."
"Will I go on the Friday school clothes?"
"I don't know."
"Oh, papa, I want you to help me do an example. This is the way it goes: 'Twenty men dig a ditch 15-2-3 feet wide and 230 yards long in 2-3-4 weeks, working 9 hours a day; 15 men dig a ditch 23 feet wide and 230 rods long in 3 weeks, working how many hours a day?' How do you do that?"

No answer.
"No answer, do you that, papa?"
"Er—do what?"
"Do that example."
"What example?"
"Why, that one I've just told you. I don't believe you know a word I've been saying."

"Yes, I do; you were telling about that Chinaman playing a fiddle."
"Christopher! That was two or three hours ago. We've talked about a lot of things since."
"Have we? Well, my son," said the boy's father, raising himself on his elbow and looking through the darkness into the other room, "we won't talk any more tonight; we had better end with that. Good night!"

"Good night," said the boy, "but I wish you'd tell me where to begin with that example."—New York Times.

When Squatrels Were Numerous.
Accounts by early writers show that squirrels must formerly have been amazingly numerous. Goodman says that the gray cat was a fearful scourge to colonial farmers, and that Pennsylvania paid \$8,000 in bounties for their scalps in 1749 alone. This meant the destruction of 640,000 within a comparatively small district. In the early days of western settlement regular hunts were organized by the inhabitants, who would range the woods in two companies from morning till night, vying as to which band should bring home the greatest number of trophies; the quantities thus killed are almost incredible now.—Ernest Ingersoll in Harper's.

A Lucky Escape.

CARERS' LITTLE LIVER PILLS.

CURE SICK HEADACHE.
Headache, yet Carers' Little Liver Pills are equally valuable in Constipation, curing and preventing the same, and while they also cure all disorders of the stomach, stimulate the liver and regulate the bowels. Even if they only cure the headache, it is a great success.

ACHE HEAD.
Ache in the head is almost needless to those who suffer from this distressing complaint, but fortunately their goodness does not end here, and those who once try them will find these little pills valuable in so many ways that they will not be willing to do without them but after all sick headaches.

ACHE HEAD.
