The Pastor of Moody **Church Preaches First Sermon**

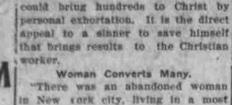

Says the Saving of Everybody in Chicago in a Year is Possible and Practical

The conversion of every one of the 2,000,000 and more residents of Chicago who are not Christians within a year is not only possible, but practical, according to the Rev. R. A. Torry, pastor of the Moody church, on Chicago avenue. Yesterday, preaching his first sermon since his return from his tour of the world, he told his congregation a plan he had devised whereby they might inaugurate the universal redemption of the city.

"Suppose," he said, "that each of the 2000 persons in this church this morning should bring but one other person to Christ and that other person bring another, and so on until the year had elapsed-the whole city would then be converted. Why, if the same plan were given a broader scope, in a few years, as I figure it, who provides the means to carry on the whole world would be converted. But, of course, you will say, we are

"My subject this morning is 'Personal Work.' I wish with reference to what I have said about converting Chicago, that I could impress upon your minds the supreme importance of permual work in religion. But I can't do it preaching to you from the pulpit, because so many of you would refuse to take my remarks as person al. That is why personal work is so valuable. The so-called heart-to beart talk' is the way par excellence te make a Christian. "I have heard Moody, one of the your minds the supreme importance

"I have heard Moody, one of the

spoken but terribly in earnest, who

wicked part of the metropolis, who became converted about a year ago. She died recently, but not until she had converted a hundred desperate characters, who had once been her companions in evil. On her dying hed she had sent for these persons and pleaded with them to become Christians. All are now members of some church, in good standing.

"Why, then, should not we of the Moody church begin today the work of converting Chicago. The plan is practical, and the reward is great. It is only necessary that we should be true to ourselves as Christians, and have abiding confidence in our own ability to get results. There is not one of us who cannot do his share of the converting. A little time taken from the consideration of every-day affairs for God's work is all that is few days ago by the Rev. Edgar J. peeded."

If you desire a gord comp stin use Moki Tes, a pure herb drin it acts it acts on the liver and maker his tit acts amouth and clear. Cores ic's head-aches. 25 cents sud 50 co.tr. Money refunded if it does not satisfy you. Write to W. H. Hooker & 'o, Buffalo, N. Y., for free sample. C. J. Fry, druggist.

Admits His Promise But Insists That he has Acted Honorably--She Wearied of Waiting

Assrances that he has an adequate defense to the \$10,000 breach of promiseentered against him by MISS Blanche Y. Keck of Saulsbury, Lehigh county, were made to his friends a Heilman, pastor of the Lutheran church at Wyndmoor.

Mr. Heilman admits that he asked Miss Keck to marry him, and insists that he has acted honorably. It is doubtful if the suit will alter the relations that exist between Mr. Hellman, who is a young man, and his congregation.

"My acquaintance with Miss Keck began when her brother and I were classmates," said Mr. Heilman. "That der and has the care of a family, has was in Muhlenberg college, Allentown

"Our engagement was announced in 1899, when I graduated. The present But, of course, you will say, we are not equal to so vast an undertaking Urges Personal Work. "My subject this morning is 'Per' them out is very trying to the nervous proceeding on the part of Miss Keck any charge she may bring against me.

"When the time comes for me to make my defense in court my counsel will make public facts which will absolve me from any possible impu-

poned for a short time. At the trial I shall be cleared, and, although I do not court publicity. I shall desire the public to know all the facts." Miss Keck mys that Mr. Heilman repeatedly promised to marry her. According to her, the first date for he wedding was Christmas day, 1897. That was postponed. Since last October, she says, he has entirely chased his attentions to her.

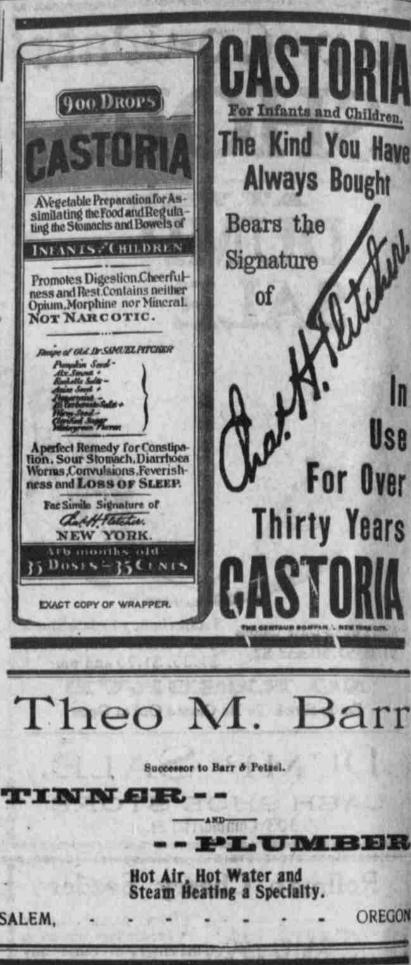

Famous as Children.

When Franz Schubert was a boy chorister in the Imperial Chapel he was known as the composer of a score of clever songs and pleces for the planoforte. Samuel Wesley was an expert organist at 3 years of age, and at 8 years produced his oratorio, 'Ruth,' 'and Vieuxtemps, at the same early age, was the admiration and wonder of musical Europe. Torquato lasso was famous

throughout Italy before he was 9 years old, an accomplished Greek and Latin scholar, and the author of clever and polished verses, and at 13 he was the center of the brilliant court at Urbino. When he was but a school boy in the Jesuit's college at Dijon Jacques Bossuet was known as one of the best classical scholars in France. At 8 years old Louis de Bourbon, Prince of Conde, was a perfect Latin scholar; three years later he published a work on rhetoric, and at 17 years he was appointed governor of Burgundy.

Feneloh displayed so much precocity that he won fame as a preacher of rare cloquence when he was but 15 years of age. Pascal wrote treatises on acoustics at 12 years of age, at which age he was busily engaged in constructing elaborate calculating machines; and at 16 years he published his treatise on conic sections, which Descartes refused to believe was not the work of a great master.

Of the more recent and familiar feats of precocity it may be sufficient to mention that John Stuart Mill was studying Greek at 3 years of age, had practically mastered the language at 7 years, and a year later was acting as school master to his younger brothers and sisters; while, to give one other example, John Ruskin actually produced a manuscript work in three volumes oefore he reached his seventh birthday-Philadelphia Public Ledger.

Harvest Season Soon Here And We Are Prepared To Supply The Binders.

PASTOR BROKE PROMISE

CHAMPION FORCE FEED BINDERS

LEAD THE WORLD

Designed especially to meet the requirements of the American farmers, the Champion force feed binder is adapted to handle all kinds and conditions of small grain, from the tallest rye to the shortest oats, and from heavy and oged to light and crinkled wheat, and also the usual and ordinary conditions. The Champion is light in draft yet firm and strong in construction. It has a wide platform, a wide closed end elevator and steep binding deck, and is fully equipped with modern devices, many of which are found on no other machine. 20 20

The Champion force feed elevator prevents choking and waste of grain at the top of the elevator. This it accomplished by shooting the grain out from the elevator in the direction in which the binding deck inclines, and carrying it within reach of the packing arms where it is made into bundles. The Champion has more than the ordinary storage space back of the needle, yet the movement of the grain from the elevator is so positive that it is not delayed, which gives the machine a great advantage in difficult conditions, such as fluffy crinkled grain, and heavy tangled grain, and is useful in all other conditions. With the Champion elevator no grain is carried down between the elevator and binding deck and wasted on the ground. Every spear is saved and put in the bundle. The Champion elevator will handle light or heavy grain equally well.

F. F. CAREY, Manager.

The distinguishing feature of the force feed elevator is two additional rollers at its top arranged in a manner to deliver the grain in the right direction as it leaves the elevator. The upper belt extends out beyond the top of the elevator, and one of these extra rollers is placed between its plies, raising the upper ply and permitting the lower and ascending ply to deflect upward in a curve. This curve in the upper belt changes the direction of the stream of grain, and aided by the other extra roller at the top of the lower belt delivers the grain positively but gently to the packing arms.

The relief rake of the Champion operating over the finger bar at its junction with the elevator prevents all accumulation of short grain, tangled grain, weeds or grass here, and permits a full swath to be out in all conditions of crop. The Champion relief rake is a useful device when the conditions mentioned are met, and is no disadvantage in any other condition, because if there is not an undue accumulation at this point the rake does not touch the grain and it takes almost no power to run. The Champion elevator extends as far forward of the knife as any other elevator.
