Summer Acne, Tetter Eczema Salt Rheum Psoriasis Nettle Rash

An itching, burning skin disease during the hot, sultry summer weather, is a positive terror and a veritable demon of discomfort. The intolerable itching and stinging are tantalizing almost beyond endurance, and the unsightly eruption and rough, red skin keep one thoroughly uncomfortable and miserable night and day. Eczema, Tetter, and diseases of this type are caused by acid poisons in the blood, which the heat of summer seems to warm into life and renewed activity. These fiery acids keep the blood in a riotous and sour condition, and the skin unhealthy and feverish-they inflame the pores and retard perspiration, when the whole body feels like an over-heated furnace, and the escaping poison burns and blisters like liquid fire.

A story is told by Robert Ogden about a friend of his, not long dead, who held securities in a certain railroad. Being told, and from a source GOOD for OLD and YOUNG to leave no doubt, that the road was about to collapse, he refused to sell, not wishing to shift the loss upon a purchaser. He had no large amount of money, but he was rich in something better. With all the venal trickery that is being exposed, we lean to a belief that men like this exist in America in larger numbers today than they did five, a dozen, or twenty years ago. We hope there will soon be fewer with salaries like those of Senator Depew, and fewer corporations which seek to have their lawyers in the legislature. "Old-fashioned honesty," M. Cleveland says, but he must be referring to some period before the Civil War. Americans are now endeavoring to halt a plunging commercial dishonesty that took its impetus with the immense practical activity of the nation after '65. In a sense we are a new nation from that date. President Eliot has spoken of business as one of the its divisions, it is coming to be.
