Concrete for Pavements.

Concrete is now being employed for paving purposes. This material promises smoothness, cleanliness of surface and durability. A foundation of cinders to the depth of 10 inches is first made and permitted to pack well for a week. Then the concrete curbing is made in the usual manner. Finally the concrete is mixed and thrown into place, considerably higher to the center and sloping to either gutter. Immediately before the concrete hardens it is marked off with an instrument to resemble a pavement laid with brick. This method will insure a firm footing for draft horses in the winter.—Indianapolis News.
