BIG CROPS THIS YEAR FOR THE U. S.

The largest hay crop in the history of the country is predicted for this year, according to advance reports received in this city. Weather conditions in the middle western states this spring have been peculiarly adapted for the growing of grasses and the latest government report placed the development to date at 93 per cent. This is an unusual figure. So great is the interest in wheat and cotton that the importance to the country of a good hay crop is seldom fully realized. Its value each year, however, is over a half billion dollars, and last year it was the second most valuable crop grown in the United States, outranking both wheat and cotton and exceeded only by corn. Hay has the unique distinction of being the only agricultural product approaching it in importance which is never sold for future delivery and that is absolutely dependent for its price on the daily fluctuations of supply and demand. In the case of the cereals and cotton the producer is able to sell his product at a figure made in a world market and a miller or manufacturer by buying for future delivery can tell beforehand what his flour or his cotton cloth is going to cost him. Large users of hay, however, do not know from one day to another what price they will have to pay. Chicago consumes 70 carloads of hay a day, or nearly 300,000 tons a year. Much of this comes from Ohio, Indiana, Illinois, Michigan, Wisconsin and Iowa, and even from points as distant as Kansas, Arkansas and Indian Territory. New York and Pennsylvania are the banner hay states, with Iowa a close third.
