

IMPRISONED FOR CELEBRATING COUNT TOLSTOI'S BIRTHDAY

(United Press Leased Wire.)
St. Petersburg, Sept. 11.—Reports today show that more than 1000 persons were arrested yesterday on the charge of violating the governmental prohibition of a formal celebration of the birthday of Count Leo Tolstol.

Most of the infractions are minor in their character, caused merely by cheering or displaying pictures of the count, and otherwise indicating pleasure at his eightieth anniversary.

In some cases, however, where the prisoners were charged with having attempted celebrations on a large scale, efforts will be made to send them as exiles to Siberia.

The arrests were few in comparison to the number of persons who celebrated the event, and the efforts of the government are somewhat feeble.

The aged count's condition is reported today to be much the same, and there is little hope that he can survive long.

Mill-stuff—Bran, \$26.
Flour—Valley, \$1.20 per sack; hard wheat, \$1.45.

WOULD I CHANGE MY WORK

The thought comes to me sometimes—would I change my life work my choice of letters as a vocation, if I had my life to live again? Certainly I would not, for the literary life seems to afford a spacious and exhilarating field for the work of a man who wishes too think and grow. Moreover, literature to me has been, not a preference, but a passion.

That I have been able to follow the choice of my heart places me among the fortunate few, for how many are forced, by the tyranny of circumstances, into lines distasteful to their sentiments? And, no doubt, this misfit of environment and this misdirection of energy are the causes of much of the dilatory and imperfect work of the world. It seems an unfulfilling truth that the best work, like nest-building and honey-making, must be as free . . . like the ETAO ing, must be done in joy. Every one should be as free, at least, as the artist to select his career and to work out his ideals.

I began as a shepherd boy, and even in those early years, I felt the lure of poetry. Many a time I stretched out on a rock, my sheep scattered about me on the hillside, and spent hours poring over Bryon's "Cain," and "Childe Harold," dreaming delicious dreams of a rosy future when I should have nothing to do but to read books and to write them.

Since that hour of boyish vision, I have been a man-of-all-work—a cattle ranger, farmer, editor and teacher. But never once did I forget my boyish hope or waver from it—never once did my purpose flag or my interest falter. Into all these paths of life I went with my whole heart; and each task was good for me, for it broadened the horizon of experience—made me know life.

I would recommend to every young man to set his heart upon some wise, central purpose, and to cleave to it to the end. Yet, if he is forced into uncongenial work, let him not sulk and sorrow, but be up and at it with conscience-care, knowing that the first duty of a man is to be manly, and knowing also, that some day he may need the enrichment and enlargement of this very experience, to fit him for the work of his heart's desire.—Edwin Markham in Success Magazine.

Debs and Others Speak

The Fertile Desert.

The desert is the most fertile area in the United States. That sounds like a paradox, yet it is true. Where did the great civilizations of antiquity arise? Where but in the fertile deserts? Egypt, Syria, Palestine, Persia, Arabia, Northern India, the north coast of Africa were all arid lands. The Incas in Peru, the Toltecs and Aztecs in Mexico, reared their civilizations upon desert plateaus.

It was within the encircling walls of the desert that they evolved their national and their religious consciousness. Out of the desert sprang all these things: as the water gushed from the rock at the blow of Moses.

The desert is most fertile because it is a savings bank without any withdrawals. Plants need potash, magnesia, lime and other foodstuffs, just as we need animals and plants.

Now in the humid lands, such as in our eastern states, the rains have

fallen for tens of thousands of centuries, and they have washed out the food of the plants. But in the arid lands the rains have fallen sparingly or not at all.

Some of the desert lands of our west contain three times as much potash, six times as much magnesia, fourteen times as much lime, as the humid lands of the east. The desert is an inexhaustible storehouse of food for the plants of thousands of years to come, a storehouse to be drawn upon as soon as the land is irrigated.—Success Magazine.
