How Many Seconds to Your Telephone?

How long does it take you to answer your telephone bell? Our records show thirty-four seconds as the average time consumed from the time you place a call to the time it is answered by the party called, and that most of this time is necessary in getting a response after the bell has been rung.

The Telephone Operator has no authority to compel an answer to her summons. She simply forwards to your telephone a mechanical signal, which, interpreted, means "Some one desires to speak with you." It remains with you, the person called, to recognize this request by responding promptly.
