SHOULD HAVE STANDARD TO INSURE QUALITY

H. W. Meyers, of This City, Reads Interesting Paper Before Oregon Retail Merchants.

Among the important papers read before the Oregon Retail association, recently held in Portland, was one on "Standardizing Merchandise" by H. W. Meyers, of this city.

This is a subject of vital interest to all retail merchants, and the ideas expressed by Mr. Meyers met with the unanimous approval of the members of the association.

Following are extracts from Mr. Meyers' paper:
"We must agree that the dominant feature of all standard merchandise is its excellence. To standardize an article is to give it quality, and in making or raising quality to be the paramount issue with the same designated to its genuineness as to name, material unchanged or modified, a great step in the direction of solving the problem is established."

"The definition of standardization I take it to be: 'That which is established by authority.' To standardize an article is to give it quality, and in making or raising quality to be the paramount issue with the same designated as to its genuineness as to name, material unchanged or modified, a great step in the direction of solving the problem is established."

"When the time arrives to accept the standardized statute, enacted and made into a law, it must be a bill of equality, so that the small retailer, as well as the larger one, and the consumer, is protected."

"Quality is what we desire, good all the way through, 100 cents worth of value for every dollar spent and taboo on all misrepresentations."

"Give us laws, the same or similar to those governing gold, silver, drugs and pure foods, establish the standard of the merchandise itself, make it carry on its face its value in size, weight, materials and workmanship, and then you have protected the uneducated buyer from inferior goods, from substitutions of all kinds and accomplished the aim and purpose of our efforts in protecting all from fraudulent monopolies."

"If a manufacturer is square and honest with his customers, he will cheerfully label his products and sell them for what they are. This is standardization. But if he is sharp in his dealings he will pass off the veneer for the solid and get what he can in a cut and slash competition."

"Our government is so particular regarding her duties in collecting the same she has installed ingenious apparatus for the testing of cotton yarns. The machines determine so accurately the true weight of such yarns that the color can be ascertained when they are changed by atmospheric conditions. When the government takes this step for dutiable purposes, it is developing the thought which will gather strength, and some day we will realize our fondly-cherished, the standardization of merchandise."
