CHILDREN NEED VEGETABLES.
Vegetables are an essential element in a child's diet after he has reached the age of three years. They are a good source of minerals necessary to growth; they are bulky and productive of peristaltic movement; and they contain food in the form of starch and more or less protein. Previous to the development of enzymes in the digestive juices, it is unwise to give the child vegetable foods. Asparagus tips, string beans, peas and spinach are among the vegetables recommended by the domestic science specialists of the O. A. C. for the child of three years. These should be cooked in salted water until tender, then mashed or run thru a sieve and served with beef juice, or cream.
