Hall's Catarrh Cure is taken internally and acts directly upon the blood and mucous surfaces of the system. Send for testimonials, free. F. J. CHENEY & CO., Toledo, O. Sold by all Drug Stores. Take Hall's Family Pills for constipation.

Illinois to Have Eugenics Law If Officials Have Way

Chicago, Sept. 23.—Illinois is to have a real eugenics law if a fight begun today to that end and backed by prominent members of the bench and municipal and state leaders is successful in the next session of the state legislature. Half wits and other mental defectives are aimed at in particular, while restrictions against the marriage of the physically unfit also will be incorporated in the proposed law. The failure of former eugenics laws to withstand the constitutional test in court will not deter the advocates of the plan, who will frame a bill according to these decisions.

Department Cautions Those Who Would Cultivate High Priced Drug Plants

Washington, D. C., Sept. 16.—Inter- ruption of importations of many drugs, spices, and oils made from plants has resulted in certain cases in abnormally high prices for the raw materials and the products derived from them. As a result, many people are looking into the possibility of profit in growing these crops in the United States. Many letters are received each week at the U. S. Department of Agriculture asking how to raise this or that drug plant. In almost every case, the drug plant specialists reply that it is doubtful whether the inexperienced grower can grow these plants successfully, or, if he succeeds, will find a satisfactory market for his crop. The raising of such plants, they point out, is a distinct specialty and calls for exact knowledge and skill comparable to that needed by the florist who, to satisfy his market, not only must raise flowers but must produce blooms at certain seasons and with unusual characteristics. Of even greater importance, however, is the fact that the total amount of drug plants that can be consumed in this country in any year is very small compared with our consumption of any of the staple crops. Overproduction in the case of drugs is more serious than in the case of staple crops because staple crops such as corn and grain if not sold can be used at home for food or for feeding stock or chickens. The drug plant, however, is profitless to the grower unless a drug manufacturer will buy it for use in medicine.

Market is Limited It is entirely possible, for example, to grow belladonna from which is derived atropine and other alkaloids very valuable in medicine. The total amount of belladonna plants the entire country uses, however, could all be grown on a few hundred acres. Because of the present interruption in the supply of belladonna, a few domestic growers have made a profit recently from this crop. A slight expansion of the industry would quickly increase the supply beyond the demand and this, together with importation, when resumed, might soon glut the local market and leave little or no profit to the raiser, unless an export market were developed. Digitalis, although one of the most important and valuable plants in this country, has a relatively small monetary value. The drug plant specialists who have been developing this plant and testing possibilities of its culture in this country have done so, not merely with the idea of fostering an industry, but because this plant is so important in saving human lives that should all supplies be cut off a serious calamity would result. For the same reason the specialists have been working with many other drug plants. It was believed that the drug specialists should be ready to raise these plants in this country if for any reason the foreign supply should be entirely cut off.

Department Experiments For years, therefore, the department has been producing many of these plants experimentally, but when the supply of certain of these drugs failed or their prices reached prohibitive figures, a few skilled growers, with the advice of the department, were able to raise small quantities of some of the more important drugs needed in the present emergency. Thymol, widely used for antiseptic purposes, is a drug manufactured in Germany from a seed grown in India. A few days after the interruption of imports the price leaped from \$2 to \$17 a pound. The department, however, had been experimenting with a common weed known as horsemint, which grows readily in the south, and yields this substance. This horsemint was brought into cultivation, its drug bearing quality improved, and a simple process for manufacturing thymol from it developed, with the result last year that there was produced commercially a small quantity of this drug. The industry, however, can not be widely extended because the total consumption, as indicated by previous reports, is only about 17,000 pounds a year, an amount which can be produced probably on less than 1,000 acres.

Lemon grass, producing lemon grass oil used widely by soap and perfume makers, can be grown in Florida on land not suitable for citrus fruits. At

most, however, only about \$100,000 worth of this oil is used per year in this country, and even if none were imported, only 2,000 or 3,000 acres of the grass could be raised without over production. A Hot Crop Always Red pepper, used both as a drug and as a condiment, seems to offer one of the most promising fields for replacing an imported by a domestic article. In 1915 in South Carolina 118 acres, yielding 152,000 pounds, were harvested. There is indication that this year nearly 500 acres may be devoted to this crop. As 1 acre produces nearly 1,300 pounds and our total imports in 1914 were only 8,829 pounds, it readily can be seen that limited acreage would provide all the pepper this country ordinarily consumes.

Camphor trees, years of experience have established, can be grown successfully in Florida, along the gulf coast and in some coast regions as far north as Charleston. Only within the last seven or eight years, however, have the department specialists considered it all feasible to grow these plants as a source of camphor. The specialists have discovered that instead of being able to take camphor from trees only once in 50 years, as has been the rule, it is possible to produce camphor each year by pruning the leaves from the trees and distilling them. The possibilities offered by this discovery led to the planting of camphor trees and there are at present 1,000 acres of trees growing in Florida. A second tract of some 18 square miles is being cleared rapidly and planted. Importations of camphor in 1914 were only about 3,500,000 pounds, valued at \$929,000. A limited area in addition to that projected, should supply all the domestic camphor for which there would be a profitable demand. The specialists point out that the domestic product, when produced in any volume, must compete in price with imported camphor. It is impossible, therefore, to estimate what prices growers could obtain for their product after full importations are resumed. This is especially true because prices for imported camphor in the past have been regulated more or less by foreign control which, in the face of domestic competition, might make important reductions in the prices heretofore charged for the imported article, unless an export market be developed.

Hundreds of Others In addition to the products mentioned, there are hundreds of other drugs, oils and spices which are imported and which it is possible for this country to produce for itself. If the aggregate value of these imported articles is rather imposing, as the figures indicate that this country has with bringing in and using about \$25,000,000 annually of the various drugs, oils and condiments. Much of this money undoubtedly can be kept at home. The mistake made by most people who consider raising these crops is that they are inclined to consider them as staple crops, whereas the domestic demand for them is relatively small, and no foreign market has been developed for them by Americans.

At the same time those in charge of the work realize that here and there in our agriculture, where soil and climate and other conditions are right, there is room for certain small industries. For many years there has been a distinct tendency for agriculturists to direct their energies along limited lines. This is indicated most clearly by certain types of agriculture prevailing in the south, where the farmers have confined their efforts very largely to the cultivation of a single crop. These small crops may therefore offer to a few of our farmers opportunities in highly specialized lines of production which will divert to a certain degree the activities of capital and labor from some of the crowded industries and also supply peculiar products for which the country has been spending money abroad. The drug specialists point out, however, that prices of these articles prevailing under the present disturbed conditions are abnormal and therefore should not be regarded as a safe basis on which to estimate regular returns from such activities.

Oregon Hens Gain Rank In Egg-Laying Contest

The Oregon hens had jumped to third place in the Missouri National Egg Laying Contest at the end of the tenth month of laying, and another pen of the same breed had reached sixth place in the Storrs' contests. The Oregon hens at Mountain Grove held third place at the beginning of August but during the month made noteworthy gains, being at the end of the month but 11 eggs behind the second pen and 40 behind the leaders. They are competing against 103 entries of leading layers from the United States, Canada and England. They had averaged 196 eggs per hen at the end of the tenth month. Oregon hens hold the record for the best week's laying at Storrs' with 64 eggs to their credit. They have been first each of the last two weeks and were second the preceding week. Their record last week was 55 eggs as against 50 for the nearest rivals and 32.9 for the general average of all pens. They not only gained a place last week but came within a single egg of gaining two places. The contest ends November 1.

New College Students Have Special Advisor

Corvallis, Ore., Sept. 23.—Since it is more profitable to start a college career right than to get right after a wrong start, young men and women entering O. A. C. for the first time this year, will be given the benefit of the counsel and advice of a specialist in the fundamentals of college life. E. H. Beay has been appointed to act as special advisor of incoming freshmen and vocationalists. This policy was devised by a committee appointed by Pres. Kerr to consider the best means of counseling the incoming freshmen and vocational students. Prof. Beay will act largely through organizations and the class officers, with whom he will confer concerning the forms and purposes of organization and approve the constitutions and by-laws. He will advise with the class officers of freshmen and vocational students in all matters involving levies of class taxes and expenditure of money. The extent to which these organizations should participate in college activities will also be made known. It is expected that this policy will result in better adjustment of the college courses, more satisfactory progress in college work and in improved college life.

WHO IS MR. HUGHES' PARTNER?

The democratic candidate for vice president is right when he declares that the American people have a right to know who is in partnership with Mr. Hughes in the business of "firm Americanism." As Mr. Marshall put it in his speech of acceptance yesterday: "Does the firm consist of Hughes and Roosevelt, or Hughes and Hohenzollern or of Hughes, surviving partner of the firm of Hughes and Huerta, closing out a shabby stock of shelf worn political patent medicines not guaranteed under the pure food act?" All the catch book progressives are vociferous in proclaiming that Mr. Roosevelt is the real partner of Mr. Hughes, but the German-American alliance is equally vociferous in proclaiming that the partner is the kaiser. As for Huerta, Mr. Hughes will never cease grieving over the downfall of that great and good man who exemplified the noble principle of government by assassination and was never guilty of timidity and vacillation in pursuing the gentle art of treason and murder. —N. Y. World.

BIG CLOVER SEED YIELD.

P. T. Eisel of Fern Ridge, informs us that the clover seed yield this year in this section is much better than expected. He started out with his big Burdell No. 9, huller on Wednesday Sept. 13, and will have about three weeks run. The quality of the seed is first class and is running from four to five bushels to the acre.—Stayton Standard.
