Increase Children's Efficiency 99.8%

A N Investigation in the MarionSchool, Cleveland, Ohio, showed that Fre of the school enrollment had decayed or irregular teeth. Twenty seven of these from one to four years behind in their grade, were organized into a dental squad. At the end of the year there had been a 198.9% increase in working efficiency of this squad.

A similar experiment in the Buckman School, Portland, Oregon showed great results. The new Prophylactic or Preventive Dentistry has for its principle—KEP THE MOUTH AND TEETH CLEAN! This doesn twean that peopleshould merely keep their front teeth clean and white on the outside, it means that all the teeth must be kept clean on all their surfaces, front, back, sides, and down to the gums, and below the gums. To make this state of cleantiness possible to a very high degree, teeth mustires the made smooth, and then highly polished.

Atter this workhas been done— After his workhas been done-if proper daily attention is given the teeth by the individual— they may be easily kept clean and healthy.
