### "FRESH POTATOES" GO DIRECT FROM SALEM TO FEED OUR ARMIES

Six Hundred Tons Dried Product, Same As 4,000 Tons Fresh Spuds

The Kings Products Company plant is one of the busiest places in town, and like a saloon in a mining town it runs 24 hours a day and seven days a week. At present it is working on a contract for the government for 600 tons of potatoes dried, dehydrated, desiccated or whatever the proper name is. This contract was taken last winter and the plant has been working on it ever since February 25. As a starter the firm bought 4,500,000 pounds of potatoes or 2,250 tons. To work these up and get them ready for processing a force of 150 women is employed working in three eight hour shifts, and besides there is a large number of other employes making the pay roll one of the largest in the city. The potatoes yield 15 to 16 pounds of dried product to the hundred pounds or are reduced to less than one sixth their weight when fresh. Besides this all waste is eliminated, and when the Willamette valley potatoes reach France there is not an ounce of waste in them. The product is packed in five gallon tin cans soldered tightly and will keep indefinitely. When opened all that is required is a soaking for a few hours and the spuds are there as fresh as when they came from under the valley soil. There are no pebbles, no spoiled potatoes, no damaged ones, half of which would have to be discarded. Instead the process makes it possible for the government to supply "fresh potatoes", to the boys in France ready for use, and so treated that one ship will carry as many of them as six would carry in their natural condition.

A government inspector is on the job all the time, watching the processes and when a carload is ready it is sent away at once. About two cars are shipped a week. Starting as it did just when Oregon and for that matter the whole country had the biggest potato crop in its history this plant has proved a boon to this section taking care already of some 2,000 tons of the crop that otherwise would have been slow about finding a market.

As soon as the contract on potatoes is finished which will be in about three weeks, the plant will begin handling loganberries. After that crop is disposed of string beans will have their inning, followed by other vegetables in their season, cabbage, celery, carrots and the like, each being given a run for its money or whatever it runs for. Some idea of the amount of business done by the company can be gained from a glance at the logging boxes piled up behind the plant, some 42,000 of them. These boxes are furnished the farmers and fruit growers for handling their products in.

### Rheumatism Back on the Job With its Old-time Fury

No Let-Up In Its Torture. Pretty soon you will be reaching for the liniment bottle again, for the millions of little pain demons that cause Rheumatism are on the war-path. Winter weather seems to awaken them to renewed fury. But your Rheumatism cannot be rubbed away, because liniments and lotions cannot reach the disease. It is in the blood, and only a remedy that goes deep down into the circulation, and routs out the disease germs, can rid you of this disabling disease. S. S. S. has given some wonderful results in treating Rheumatism. Being a purely vegetable blood remedy, it purifies the blood of every germ, and thus removes the cause of Rheumatism. Get a bottle to-day at your drugstore, and start on the right treatment that will get results. Free advice about your case can be had by writing to Medical Director, 26 Swift Laboratory, Atlanta, Ga.
