The Inspiration of Adversity

By FRANCIS H. SISSON, Vice President Guaranty Trust Com pany of New York,

America may well look to France for example and inspiration in preparing to develop her foreign trade after the war. In all history there is no people whose rising to meet a seemingoverwhelming assault upon everything they consider worth while has had such power over the emotions of mankind. There has been a complete surrender of the naton as a whole to the idea that every available agency should be utilized for the single purpose of winning the war. France has sustained every shock of war. Some of the fairest portions of her territory have been overrun, and others are use less except for military operations.

Now, with characteristic adjustability, the French are transforming emergency into opportunity. In all their preparations for reconstruction when peace comes they are applying the principles that have been at the foundation of their efficiency in the war. They propose to keep mobilized for a considerable period after the war is over that spirit of unity, co-operation and concentration in enterprise that has kept them from vassalage since those things for which this country in the war began,

France sees clearly the double naestablish its relationship with other from her than Germany. countries. In doing both she looks to

themselves manage their fleets and are encouraged to make them as effective as possible by the distribution of The Minister of Maritime Transport and Merchant Marine holds that to or England would handleap French

shipbuilders because of the cost of materials and transportation. This would mean that French exporters would have to pay higher freight rates to the owners after the ships were in the water. This would place not only exporters but all French industry under a handicap in the competition for after-war markets. It is proposed, there-fore, that the state shall replace destroyed ships, as it can buy materials more cheaply, and therefore will be able to contract for new ships on a basis of insuring reasonable rates to the trader. The government contracts to replace ships in this manner within three years after the war, these ships becoming the absolute property of these from whom their equivalents

On the other hand, the Ministry proposes to build a state-owned fleet for the colonies, which will be managed by ship owners, the state sharing in the profits and deficits. There will be no more subsidies for ships in which the government has no interests. With these plans go proposed harbor improvement. France has today no harbor where ships of the largest types can dock. The government plans further to co-ordinate rallroads and shipping lines, especially across the Medterranean to Algiers and Tunis.

While France cannot avoid making extensive purchases of building materials and machinery abroad, she plans to curtail largely her food imports, Wheat, barley and rye are grown or-dinarily, but the war has brought many changes, and the French are getting acquainted with the beaper cereals, such as leding, cori aillet and rice flour. In the government remended that every parcel of soil not cultivated be sown without delay with wheat, barley, Indian corn and oats, and planted with pointees and rege-
