Unknown Visitors Thought To Have Aided Convicts In Escape From Hospital

Further interest is added to the recent escape of the two inmates, Southwick and Birchoux, from the state hospital by the testimony of a hospital attendant who recalled that a young man, apparently 17 or 18 years of age, called at the reception room of the institution both Monday and Tuesday evenings and had a talk with Southwick. The youth stated that he was a younger brother of Southwick, and that he had driven from Idaho by auto. The authorities are inclined to think he really was the brother, and suspect that he was the means of smuggling the two men and the file into possession of the two inmates. But a peculiar feature of the situation is that Southwick's sister, Florence, tells a conflicting story. She states that her brother told her that the young man was a parolee prisoner who had visited Salem for the purpose of reporting to the parole board. She has asked permission to go to her home at Nampa, Idaho, agreeing to let the authorities know if she does not find her brother there. At the latest reports no clue had been found as to the whereabouts of the fugitives, or the direction they took.

Principal Nelson of the high school and Prof. Morton Peck of Willamette university, returned last night from an outing of four days which they spent in the foothills of Mount Jefferson, devoting their time mainly to the collection of botanical specimens. While the flora in the valley was almost entirely dried up with the heat, in the hills the vegetation is in its glory, and they were able to secure many fine specimens. Aside from the botanical work they climbed up the slopes of Jefferson beyond the snow line and secured wonderful views of the surrounding scenery.

They show the daughter of the family, Miss Evelyn, standing beside a stalk of rye and a stalk of wheat, which are several feet above her head, though she stands 5 feet 8 inches. The wheat is 5 feet 3 inches high, and the rye is 5 feet 9 inches high. Probably there are very few such grass fields in the valley that can surpass these measurements. Mrs. Limbeck states that they have 45 acres of the wheat, which made a field of 60 bushels to the acre, which is a remarkable record for a hot dry season. They also have 30 acres of rye, a large part of which will run very close to the specimen brought in.
